## General Summary for Saturday, 4 May, 2024

### British Mountain Summary:

#### Based on forecast chart for noon 4 May, 2024

A broad and very slack area of low pressure will edge north bringing extensive low cloud and areas of drizzle, with again bursts of heavy, perhaps locally thundery rain, developing into Scotland. Best breaks in cloud and sun in the northwest Highlands, and clearer, brighter conditions developing for southern Wales.

### Headline for Peak District

Morning low cloud and drizzle, tending to slowly clear from south in the afternoon.

## Detailed Forecast for Saturday, 4 May, 2024

<b>How windy? (On the summits)</b>	South to southwesterly 10 to 20mph.
<b>Effect of wind on you?</b>	Fairly small.
<b>How wet?</b> (Precipitation and its impact)	<b>Morning drizzle and rain clearing</b> Drizzly at first in hill fog, plus bursts of rain for a time, but likely to clear away northwestwards slowly during the afternoon. Then generally dry.
<b>Cloud on the hills?</b>	<b>Extensive at first, lifting and clearing</b> Blanket fog from many mid-slopes upward from dawn, for much of the morning into early afternoon. Then likely to lift and break up gradually from the south as the afternoon progresses leaving hills largely clear by late afternoon.
<b>Chance of cloud free summits?</b>	<b>20% rising to 80% by late afternoon</b>
<b>Sunshine?</b> Air clarity (below cloud)	Overcast, then some sun coming out through high cloud from mid afternoon. Murky in morning, but visibility becoming generally good in afternoon, possible slight haze persisting.
<b>Temperature (at 600m)</b>	7 to 10C.
<b>And in the valleys</b>	8C at dawn, rising to max 16C.

## Peak District - Looking Ahead

	Sunday 5 May	Monday 6 May
<b>How windy? (On the summits)</b> <b>Effect of wind on you?</b>	Southwesterly 10 to 15mph in the morning, but tending to drop in the afternoon. <b>Small</b>	East to northeast 5 to 15mph, risk though of higher gusts around any heavy showers. <b>Small, but scope for local sudden gusts of in and around any heavy, perhaps thundery, showers.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Mostly dry</b> Bar an isolated shower or two, dry conditions will prevail through the day.	<b>Showers breaking out, some heavy.</b> After a mostly dry morning, clouds will bubble up towards and into the afternoon with the risk of scattered showers, some heavy.
<b>Cloud on the hills?</b>	<b>Mostly clear</b>  A few patches of cloud here and there on some slopes in the morning, but will disperse to leave the hills clear.	<b>Low cloud lifting off the tops.</b>  Banks of low cloud at varying heights from dawn, some hills perhaps clear. Bases will tend to rise of the tops and clear, but reforming in showers.
<b>Chance of cloud free summits?</b>	<b>70%</b>	<b>Lifting to 70%</b>
<b>Sunshine?</b> Air clarity (below cloud)	A mix of cloud and patchy sun.  Visibility good or at times very good.	Cloudy periods, but also spells where the sun breaks through. Visibility good or very good at times, but poor in any heavy showers.
<b>Temperature (at 600m)</b>  <b>And in the valleys</b>	8C lifting to 11C  Lifting to 17 to 19C	10 or 11C  17 to 19C

**Planning Outlook****All mountain areas of Britain from Sunday, 5 May, 2024**

Slow-moving weather patterns continue through the Bank Holiday weekend as a weak zone of low pressure dominates over the British Isles. There will remain uncertainty of local day-to-day detail, but most likely the wind often light and temperatures generally mild, but less warm than midweek in western Scotland. Sunday into Monday, will see varied zones of heavy showers forming, local thunderstorms, but some places escaping often dry with the best sunny breaks for coastal areas as the convection builds inland. High pressure then tends to build from the west into midweek to bring a fair amount of dry weather, although rain bearing fronts may return to the northwest at times.
