Planning Outlook

All mountain areas of Britain from Wednesday, 8 May, 2024

High pressure is nearby during the week ahead, but weak fronts drifting in from the Atlantic on southwesterly winds bring periods of rain and drizzle to western Scotland - the mountains often covered in cloud here. Drier with higher cloud bases toward the central and eastern Highlands. England and Wales mostly dry, isolated showers, hills often clear, light winds and mild or increasingly warm. Dry and warm for much of Britain to start the weekend with southerly breezes, but a greater risk of some rain or showers by Sunday. Showery conditions more likely into the start of next week with lower pressure likely.
