General Summary for Monday, 23 September, 2019

British Mountain Summary:

Based on forecast chart for noon 23 September, 2019

The remnants of several fronts will give extensive fog and patches of rain and drizzle after dawn. Conditions will slowly improve: most rain will die out and generally cloud base progressively rise. Wales, after a lull to some sun will deteriorate quickly from SW afternoon.

Headline for Southeastern Highlands

Wind light. Drizzly rain slowly fizzling out. Cloud base only slowly rising.

Detailed Forecast for Monday, 23 September, 2019

How windy? (On the Munros)	Southerly 15mph.
Effect of wind on you?	Small.
How wet? (Precipitation and its impact)	Patches drizzle and rain Pockets of rain, typically lasting an hour and also drizzly showers, will move slowly north. Total rainfall small. The rain all clearing from the south mid to late afternoon.
Cloud on the hills?	Very extensive; cloud base slowly lifting Fog extensive; in some areas from lower slopes up most or all day. Highest base, occasionally up to 700m will be west of A9 near and north of lochs Tummel and Rannoch.
Chance of cloud free Munros?	Almost nil
Sunshine? Air clarity (below cloud)	Dull and misty much of day. Here and there, brightening to give patches of sun and good visibility.
How Cold? (at 900m)	9C
Freezing Level	Above the summits.

Southeastern Highlands - Looking Ahead

	Tuesday 24 September	Wednesday 25 September
How windy? (On the Munros)	Southeasterly 15 to 20mph	Southeasterly 15mph or less.
Effect of wind on you?	Small	Small.
How wet? (Precipitation and its impact)	Occasional rain Rain and drizzle on and off, most likely near central belt, where it may set in later in afternoon.	Rain and drizzle on and off Patches of rain and drizzle will drift about slowly, in places the rain falling for several hours, whilst perhaps within a few miles, very little.
Cloud on the hills?	Extensive There may be a few breaks above the summits in Perthshire. Overall, higher areas cloud frequently covered, and periods when persistent above 500m, and patches below 300m, especially near and east of the A9.	Extensive all day Fog will be extensive above 350 to 550m although there may be breaks to 800m west of the A9 near and north of Lochs Rannoch and Tummel. Nevertheless, fragments will hang on some lower slopes most or all day.
Chance of cloud free Munros?	10%	10%
Sunshine? Air clarity (below cloud)	Little if any sunshine Frequently hazy or misty.	Rare glimpses of sun, if any. Hazy.
How Cold? (at 900m)	9C	9C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook**All mountain areas of Britain from Tuesday, 24 September, 2019**

Low pressure will dominate the weather all week, bringing frequent rain and low cloud, and intermittently strong upland winds.

As several areas of low pressure track across the country, the weather pattern will often be complicated, making day to day local detail difficult to forecast. However, there remains strong evidence that the driest area will be areas near and north of the Great Glen.

Forecast issued at 16:01 on Sunday, 22 September, 2019

The production of the Scottish forecasts is fully funded by the Scottish Government through the Mountaineering Council of Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary.

However, expected conditions can still change after issue. © Copyright Geoff Monk & Associates, 2019.
