General Summary for Saturday, 13 January, 2018

British Mountain Summary:

Based on forecast chart for noon 13 January, 2018

Widespread strong gusty winds, reaching gale force western and northern upland areas. Very extensive fog on the summits, although this breaking up north of some higher tops. Rain, or inland partly refrozen rain, will extend slowly inland from west, but timing uncertain.

Headline for Brecon Beacons

Upland winds near gale. Most summits shrouded in fog. Rain spreading inland.

Detailed Forecast for Saturday, 13 January, 2018

| | |
|--------------------------------------|--|
| How windy? (On the summits) | Southeasterly, 30 to 40mph; local strong gusts lower slopes, notably windy some passes and cols. |
| Effect of wind on you? | Walking arduous on higher areas, and in some areas, not necessarily higher tops, sudden considerable buffeting. Significant wind chill. |
| How wet? | Rain slowly edging inland Timing uncertain, but rain will slowly envelop hills toward the west coast and extend inland. The rain may not reach easternmost summits. |
| Cloud on the hills? | Extensive Almost blanket fog above 350 to 500m ,but perhaps for periods above 600m northwest of Brecon and Llandrindod. However, in rain, the breaks will gradually fill in. |
| Chance of cloud free summits? | 20% |
| Sunshine and air clarity? | Little or no sun. Good visibility, although a haze below cloud. |
| How Cold? (at 750m) | 1 to 3C, coldest east Wales. Will feel as cold as minus 12 Celsius directly in the wind. |
| Freezing Level | 850m east Wales; elsewhere above all summits. |

Brecon Beacons - Looking Ahead

| | Sunday 14 January | Monday 15 January |
|---|---|--|
| How windy? (On the summits) Effect of wind on you? | South to southwesterly, 10mph - strengthening after dark. Negligible during daylight. | At dawn southwesterly 55mph; during daylight soon easing to give a temporary lull, then westerly 30mph. Will impede ease of walking on higher areas (after difficult walking conditions overnight and just into daylight). |
| How wet? | Risk of a little drizzle A little drizzle, mostly or only areas south and west of Brecon. | Snow and hail showers increasingly Overnight rain, perhaps finishing as snow on highest tops, will clear from west after dawn. Showers will follow, mainly afternoon, when of snow above 450m |
| Cloud on the hills? Chance of cloud free summits? | Extensive Fog from lower slopes up very persistent south Wales, except perhaps Black Mountains, where fog confined to valleys. In mid-Wales, confidence low: fog some valleys and summits, but some areas cloud free. 30% | Intermittently shrouding higher areas Fog across the hills post dawn clearing to leave only shafts of cloud below 550m near showers, whilst frequently fog confined to or mostly above highest summits. 60% |
| Sunshine and air clarity? | Patches of sun mostly mid and east Wales, in some areas above fog. General haze, although visibility excellent where above cloud. | Sunshine, most widely east Wales middle of day and afternoon. Away from precipitation, the air soon very clear. |
| How Cold? (at 750m) Freezing Level | 3C Above the summits, but some terrain frozen after a frost. | 3C dropping erratically to 0C during daylight. Post dawn above summits. The dropping to reach 750m before dusk. |

Planning Outlook**All mountain areas of Britain from Sunday, 14 January, 2018**

Almost constant strong cold westerly winds, frequently gale force on the mountains next week, will bring copious snowfall to western mountains, concentrated on the W & NW Highlands. The snow and often hail, will be showery in character, and accumulations will drop progressively eastwards. Temperatures only marginally above freezing point lower slopes Scotland, and frequently below freezing above about 600m England and Wales.

Winds may well veer northerly late in the week, maintaining low freezing levels.
