General Summary for Saturday, 20 May, 2017

British Mountain Summary:
Based on forecast chart for noon 20 May, 2017

Low pressure and an occluded front over northern Scotland brings low cloud and rain to much of the Highlands in the morning - this will fade, but will be replaced by heavy slow moving showers into the afternoon. For England & Wales, heavy showers will spread increasingly from the south-west, although Wales should improve in the afternoon.

Headline for Cairngorms NP and Monadhliath

Rain frequent or persistent. Low cloud. Light winds.

Detailed Forecast for Saturday, 20 May, 2017

<p>How windy? (On the Munros)</p> <p>Effect of wind on you?</p>	<p>Variable, 10mph or less for several hours. By afternoon, becoming southwesterly, freshening 15 to 20mph, perhaps 25mph by evening.</p> <p>Small, but may become gusty around showers.</p>
<p>How wet?</p>	<p>Persistent rain, showery bursts later Rain in some places may rarely cease all day, at best on and off - sleet or wet snow highest summits. Into afternoon & evening, showery bursts likely spreading from the south-west.</p>
<p>Cloud on the hills?</p> <p>Chance of cloud free Munros?</p>	<p>Extensive Shrouding most mountains above 600 to 800m, at times lower, particularly in rain, and in north & east Cairngorms NP; generally highest bases toward Glen Garry & Ben Alder.</p> <p>20%</p>
<p>Sunshine and air clarity?</p>	<p>Sunshine unlikely. Visibility very poor due to rain, and foggy many tops.</p>
<p>How Cold? (at 900m)</p> <p>Freezing Level</p>	<p>2 to 4C</p> <p>Close to freezing on highest summits</p>

Cairngorms NP and Monadhliath - Looking Ahead

	Sunday 21 May	Monday 22 May
How windy? (On the Munros)	Southerly, 25 to 35mph, likely strongest into afternoon.	South to southeasterly, 30 to possibly 40mph.
Effect of wind on you?	Walking impeded where exposed on higher terrain.	Walking arduous on the hills; buffeting where exposed on & north of major ridges.
How wet?	Little or no rain Small risk patches of rain or drizzle, most likely southern Cairngorms NP & Ben Alder.	Risk rain developing south Detail uncertain: An increasing risk of persistent rain spreading from south, but many hours may escape dry.
Cloud on the hills?	Lifting from most hills Banks of cloud drifting around some slopes in morning, but should lift toward higher tops, and most summits clearing.	Mostly south & east Areas accessed from Strathspey may be free of low cloud much of the day, but risk of cloud forming extensively southern Cairngorms NP & Deeside, particularly as rain develops.
Chance of cloud free Munros?	70%	50%
Sunshine and air clarity?	Occasional sun mainly northern Cairngorms. Visibility mostly very good.	Sun likely weak and confined to north; becoming overcast. Visibility very good away from rain, although increasing haze.
How Cold? (at 900m)	3 rising to 6 or 7C	7 to 10C; warmest north.
Freezing Level	1200m at first, then lifting above higher summits.	Above the summits

Planning Outlook**All mountain areas of Britain from Sunday, 21 May, 2017**

Low pressure will lie to the west, and high pressure to the east of Britain on Sunday & Monday, resulting in a strengthening south to south-easterly wind. A front advances north on Monday, bringing an increasing risk of rain for many. Into midweek, a legacy of patchy rain or showers is likely, but pressure should be building slowly. In the second half of the week, expect plenty of dry weather, but it will be quite humid, bringing a risk of extensive low cloud to many mountains, particularly in the west, and a general haze. Isolated afternoon showers possible. Becoming fairly warm, and winds often light.

Forecast issued at 16:07 on Friday, 19 May, 2017

The production of the Scottish forecasts is fully funded by the Scottish Government through the Mountaineering Council of Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Geoff Monk & Associates, 2017.
