General Summary for Monday, 14 August, 2017

British Mountain Summary:

Based on forecast chart for noon 14 August, 2017

Extensive rain and low cloud associated with a shallow area of low pressure will affect particularly western mountains. The rain will be intermittent and low cloud patchy on the Pennines and also E & N Scotland.

Headline for Snowdonia National Park

Rain intermittently; fog covering higher areas.

Detailed Forecast for Monday, 14 August, 2017

How windy? (On the summits)	South to southwesterly 20-30mph; may occasionally reach 35mph Snowdon range
Effect of wind on you?	Will impede walking across higher areas
How wet?	Rain on and off Rain, varying from showers to patches lasting an hour or so throughout the day. The rain heaviest and most persistent western hills.
Cloud on the hills?	Fairly extensive on higher areas Many summits, particularly east Wales will intermittently clear. Nevertheless, in and after rain, fog widely above about 600m, possibly lower afternoon and evening western slopes south from Snowdon to Llyn peninsula.
Chance of cloud free summits?	30%
Sunshine and air clarity?	A few bursts of sun mainly east Wales. Visibility intermittently poor.
How Cold? (at 900m)	10C
Freezing Level	Above the summits

Snowdonia National Park - Looking Ahead

	Tuesday 15 August	Wednesday 16 August
How windy? (On the summits) Effect of wind on you?	Southwest or westerly: 15-20mph Small	Morning: west backing southerly 15-25mph, perhaps 30mph by midday. Then strengthening 35-45mph, strongest west. Walking increasingly difficult where exposed afternoon and evening, mainly higher slopes. Sudden gusts some lower slopes.
How wet?	Showers Showers occasionally; becoming restricted to well inland afternoon. Small risk of the showers frequent over an hour or so morning.	Rain spreading east Dry most or all morning. Then rain spreading eastwards and continue on and off through the rest of the day.
Cloud on the hills? Chance of cloud free summits?	Fairly extensive, but gradually lifting Most if not all hills shrouded in cloud for much of the day especially western hills. Bases will tend to lift and by afternoon cloud unlikely below 850m and may clear higher summits by evening. 30%	Deteriorating: becoming extensive Cloud clear of most or all summits morning. But will deteriorate as rain approaches. Cloud will become persistent above 600 to 800m, and occasionally lower western hills late in day. 30%
Sunshine and air clarity?	Occasional sunshine but increasingly sunny afternoon near the coast. Excellent visibility.	Occasional sun morning before high level cloud thickens to cut out the sun. Excellent visibility morning. Then increasingly poor visibility in rain.
How Cold? (at 900m) Freezing Level	8 to 10C Above summits	9C. Above the summits.

Planning Outlook**All mountain areas of Britain from Tuesday, 15 August, 2017**

Generally westerly winds over the coming week will bring further rain and areas of low cloud, particularly to western mountains. It will become very windy, particularly on western mountains on Wednesday where rain will be particularly extensive.
