General Summary for Saturday, 10 November, 2018

British Mountain Summary:

Based on forecast chart for noon 10 November, 2018

South to southwest winds, strongest at dawn, will bring frequent showers to western hills, and these extending well inland across Wales and later northern England. Cloud fairly extensive across higher western areas. Best conditions across northeast Scotland.

Headline for Snowdonia National Park

Fairly extensive hill fog and frequent showers, risk thunder.

Detailed Forecast for Saturday, 10 November, 2018

How windy? (On the summits)	Southwesterly 20-30mph, strongest at dawn.
Effect of wind on you?	Mostly small, but marked wind chill in exposure; especially around dawn.
How wet? (Precipitation and its impact)	Frequent showers Showers, sometimes frequent with the rain almost constant for a couple of hours, particularly west Wales. Risk of thunder.
Cloud on the hills?	Fairly extensive higher areas Cloud often shrouding higher areas above 700m in fog, most extensively across Snowdon Range/Cadair Idris, with shafts to or below 500m in showers. Across east Wales, cloud only rarely capping higher tops.
Chance of cloud free summits?	30%
Sunshine? Air clarity (below cloud)	Bursts of sunshine, particularly across east Wales. Visibility generally good or in east Wales very good.
How Cold? (at 900m)	3C
Freezing Level	Just above highest tops.

Snowdonia National Park - Looking Ahead

	Sunday 11 November	Monday 12 November
How windy? (On the summits) Effect of wind on you?	Southerly 20 to 30mph. Likely to impede ease of walking on higher areas.	South to southwest 25 to 35mph, but perhaps 45mph for a few hours western coastal hills. Walking fairly arduous at times across higher areas, particularly coastal hills where locally difficult. Significant wind chill.
How wet? (Precipitation and its impact)	Showers Intermittently dry, but showers and perhaps over an couple of hours, almost constant rain. Hail higher slopes; risk thunder.	Frequent showers Showers gaining coming in one after another to give frequent precipitation across many western areas. Showers least numerous across east Wales.
Cloud on the hills? Chance of cloud free summits?	Extensive on higher slopes Most higher tops covered in cloud, frequently base 850m, dropping to 500m near showers, and perhaps for several hours westernmost slopes Llyn peninsula to Snowdon. There may be breaks to higher tops for a couple of hours. 40%	Extensive higher western areas Cloud is likely to shroud western hills above 600-800m extensively throughout the day. Patches forming to 500m or below in showers. However, cloud only occasionally capping higher tops in east Wales. 20% west, 60% east
Sunshine? Air clarity (below cloud)	Sunshine occasionally. Visibility often excellent, but abruptly poor in rain.	Bursts of sun, most frequent east Wales. Visibility very good.
How Cold? (at 900m) Freezing Level	4C Above the summits.	4C Above the summits.

Planning Outlook**All mountain areas of Britain from Sunday, 11 November, 2018**

Winds almost constantly southerly over the next week to ten days will mean only higher summits in Scotland occasionally below freezing point. Rain at some stage most days (although probably drier from mid-week next week). Often windy and fog will frequently shroud the summits - and at times even lower slopes. Generally least rainfall and often little low cloud NW Highlands.
