General Summary for Wednesday, 13 February, 2019

British Mountain Summary:

Based on forecast chart for noon 13 February, 2019

Mild south to southwesterlies bring patchy rain or drizzle, and extensive low cloud, focused on western hills. Small amounts of drizzle England and Wales, plus the north/east of Scotland. Gale force winds across many hills, very gusty in places through passes and cols.

Headline for Snowdonia National Park

Windy, gale force in places. Largely dry. Low cloud west.

Detailed Forecast for Wednesday, 13 February, 2019

How windy? (On the summits)	South to southwesterly, 30 to 40mph, risk local 45-50mph Snowdon range; strongest near/north of major ridges and summits.
Effect of wind on you?	Buffeting at times, in places through passes and cols and locally gusty to lower slopes. Noticeable wind chill.
How wet? (Precipitation and its impact)	Mainly dry Chance of drizzle confined to coastal hills on Llyn peninsula.
Cloud on the hills?	Patchy very low cloud, breaks Banks of cloud, at times to lower slopes near the Irish Sea. Some tops may emerge above or between cloud layers. Breaks to high tops most frequent north and east of the A5.
Chance of cloud free summits?	40% near west coast; rising to 70% inland/east.
Sunshine? Air clarity (below cloud)	Glimpses of sun, mostly toward north, where visibility generally good. Slight haze toward west coast.
How Cold? (at 900m)	3 to 5C; small change of temperature with increasing height on the hills. Where directly exposed to wind, feeling like -7C.
Freezing Level	Above the summits.

Snowdonia National Park - Looking Ahead

	Thursday 14 February	Friday 15 February
How windy? (On the summits) Effect of wind on you?	Southerly, 20 to 35mph; strongest winds not necessarily higher slopes. Local buffeting through passes and cols, and gusty in places to lower slopes north of major ridges.	Timing uncertain in this forecast: South to southwesterly, 30-45mph risk strengthening to 50-60mph for a few hours. Frequent buffeting, and very gusty in places. Threat of arduous conditions on the hills for at least part of the day.
How wet? (Precipitation and its impact)	Dry overall	Chance of rain developing Most likely staying substantially dry for many hours, perhaps much of the day. Gradually, a risk of patchy rain pushing in from west (timing uncertain).
Cloud on the hills? Chance of cloud free summits?	Mostly very little Fragments of cloud drifting around some slopes in morning. Likely all breaking up. 80%	May lower onto western hills Many tops may start cloud free, perhaps staying clear much of day away from the west coast. Increasing risk of patches forming on Snowdon range. 70%
Sunshine? Air clarity (below cloud)	Mostly sunny. Visibility good, but a general slight haze.	Early sun may weaken as high cloud builds from west; may cloud over increasingly. Visibility good, but slight haze, and reducing if rain develops.
How Cold? (at 900m) Freezing Level	7 to 10C; warmest north/east of the A5. Above the summits.	5 to 8C or locally above, may lower a degree or so from west through day. Above the summits.

Planning Outlook**All mountain areas of Britain from Thursday, 14 February, 2019**

South to southwesterly winds persist into the weekend; often windy, gales at times, particularly Scottish Highlands. Low cloud will often plague western hills, with patchy rain or drizzle as weak fronts come in from the Atlantic from time to time. Generally small amounts of precipitation; often dry away from west coasts. Apart from a brief drop of temperature during Friday in Scotland, the mountains will be above freezing for several days ahead. A period of thaw across all areas, leaving mostly very little snow cover into next week.

Forecast issued at 14:39 on Tuesday, 12 February, 2019

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Geoff Monk & Associates, 2019.
