General Summary for Thursday, 12 July, 2018

British Mountain Summary:
Based on forecast chart for noon 12 July, 2018

A weak front will bring largely cloudy and damp conditions across the Scottish Highlands with cloud shrouding the hills much of the day; but tending to lift to higher slopes with local showers breaking out. Elsewhere, early patches of mist and low cloud will lift and clear, but scattered showers will develop.

Headline for Southeastern Highlands

Extensive low cloud gradually lifting. Risk of afternoon showers.

Detailed Forecast for Thursday, 12 July, 2018

How windy? (On the Munros)	Direction variable, rarely more than 5mph.
Effect of wind on you?	Negligible
How wet? (Precipitation and its impact)	Patchy drizzle, risk of a shower later Many places substantially dry, but a little drizzly rain may linger for several hours locally. A possibility of isolated showers breaking out in the afternoon.
Cloud on the hills?	Extensive, lifting with local breaks PM Areas of cloud from low levels up from dawn giving fairly extensive hill fog. Generally becoming confined above 800m, with breaks to 1000m or above. Locally, low cloud may hang over the hills for many hours.
Chance of cloud free Munros?	40%
Sunshine? Air clarity (below cloud)	Mostly cloudy, but here and there occasional sun breaking through in the afternoon. A general haze, perhaps murky some areas, but visibility becoming good or very good into the afternoon.
How Cold? (at 900m)	9 to 12C, coolest where in cloud.
Freezing Level	Above the summits

Southeastern Highlands - Looking Ahead

	Friday 13 July	Saturday 14 July
How windy? (On the Munros)	Direction variable, little wind much of day. Locally gusty around showers.	Southwesterly 15-25mph; strongest later in afternoon.
Effect of wind on you?	Mostly negligible	Mostly small until late afternoon.
How wet? (Precipitation and its impact)	Risk an isolated thundery shower A few drizzly outbreaks or even a local burst of rain possible from early morning, but many places often dry. Chance of a local heavy shower or isolated thunderstorm afternoon/evening.	Dry until evening Dry for much of the day, but increasing threat of a few spots of rain or drizzle arriving from the west into the evening.
Cloud on the hills?	Becoming confined to high tops Banks of cloud at various levels from lower slopes up post-dawn. Most cloud lifting above 700-900m, with breaks to higher tops in afternoon.	Very little until late afternoon/evening Hills very likely clear for much of the day. However, from late afternoon, cloud will thicken and lower onto the hills and later become extensive, in places to lower slopes.
Chance of cloud free Munros?	40%	70%
Sunshine? Air clarity (below cloud)	Occasional sunshine breaking through. Visibility typically very good; locally murky early in day.	Occasional sunshine; clouding over from west later in the afternoon. Visibility very good.
How Cold? (at 900m)	10 to 13C	12 or 13C
Freezing Level	Above the summits	Above the summits

Planning Outlook**All mountain areas of Britain from Friday, 13 July, 2018**

Pressure stays fairly high on Friday, but some instability in the atmosphere will trigger a few showers over the hills - local thunderstorms possible. Areas of low cloud, but also breaks to many higher summits. Winds generally very light.

By the weekend, weak fronts to edge east across Scotland bringing a little drizzly rain and low cloud; mainly across western hills. It will remain largely dry across England and Wales. A fairly slack pressure pattern is likely into next week, and with a warm and quite humid airmass in place, showers will develop; these perhaps more widespread later in the week.

Forecast issued at 16:35 on Wednesday, 11 July, 2018

The production of the Scottish forecasts is fully funded by the Scottish Government through the Mountaineering Council of Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Geoff Monk & Associates, 2018.
