General Summary for Friday, 27 November, 2020

British Mountain Summary:

Based on forecast chart for noon 27 November, 2020

A little rain Scottish Highlands, and mainly near the west coast low cloud. Elsewhere, dry, but fog wise very varied conditions. Fog in many valleys thins only slowly - if at all. On the hills, cloud often covering higher tops near N Irish Sea, otherwise tops often cloud free.

Headline for Brecon Beacons

Hardly any wind; fog lower slopes. Small risk rain afternoon.

Detailed Forecast for Friday, 27 November, 2020

How windy? (On the summits)	Southeasterly 10mph.
Effect of wind on you?	Negligible.
How wet? (Precipitation and its impact)	Precipitation unlikely Increasing risk of rain Brecon Beacons and Black Mountains mid to late afternoon.
Cloud on the hills?	Many summits cloud free On the hills, patches on highest tops, but mostly cloud free. In and above valleys areas of fog or very low cloud, persisting all day in some areas.
Chance of cloud free summits?	90%
Sunshine? Air clarity (below cloud)	Sunshine and excellent visibility on higher areas - although increasingly cloud afternoon. Lower down, areas where dull murky or foggy, especially east Wales.
How Cold? (at 750m)	2C, tending to rise slowly through day
Freezing Level	Above the summits. Widespread slight frost after dawn.

Brecon Beacons - Looking Ahead

	Saturday 28 November	Sunday 29 November
How windy? (On the summits)	Southeast or easterly 20-25mph, but locally 30mph.	Easterly 10 to perhaps 20mph south of Brecon.
Effect of wind on you?	Mostly fairly small, locally sudden buffeting in gusts, including on some lower slopes.	Mostly negligible
How wet? (Precipitation and its impact)	A little light rain here and there A few pockets of light rain likely to clear northwards.	Rain not expected
Cloud on the hills?	The mountains largely free of cloud Fog very extensive and thinning only slowly very widespread in and above valleys; the top near or below 450m. Patches on higher slopes will very likely all clear.	Higher areas cloud free A mix of fog and mist on lower slopes, most extensive morning. Above 300 to 500m the hills above the cloud.
Chance of cloud free summits?	70%	80%
Sunshine? Air clarity (below cloud)	Increasingly sunny with superb visibility on the mountains. Lower down, the sun coming through and fog and murk thinning only slowly, initially west Wales.	Foggy, misty or murky lower slopes, particularly east Wales in morning. Superb visibility on the hills.
How Cold? (at 750m)	6C.	8C
Freezing Level	Frost in some valleys from dawn. Lifting just above freezing to higher slopes.	Above the summits, although slight frost some slopes after dawn.

Planning Outlook**All mountain areas of Britain from Saturday, 28 November, 2020**

Very much drier over the coming week, although weakening fronts will bring a little rain and pulses of strong winds, mainly to the NW Highlands. Elsewhere, winds light and although extensively dry, fog will be widespread in and above valleys whilst higher up many summits become cloud free.

Temperature wise, the odd brief incursion of sub-freezing air onto higher summits Scottish Highlands, but any sustained cold at least a week off. Frost in valleys mostly confined to England and particularly Wales.
