General Summary for Saturday, 12 July, 2025

British Mountain Summary:

Based on forecast chart for noon 12 July, 2025

Hot everywhere, rising to 30C in valleys widely by early afternoon, slightly cooler easternmost areas. Unbroken sunshine dawn til dusk. Light winds, though breezier west coast of Scotland, particularly on islands. Very dry ground conditions - high fire risk.

Headline for Brecon Beacons

Hot sunshine. Increasing breeze.

Detailed Forecast for Saturday, 12 July, 2025

How windy? (On the summits)	Southeasterly 15mph or less. Rising towards easterly 20mph by evening.
Effect of wind on you?	Small, but feeling breezier later.
How wet? (Precipitation and its impact)	Very likely dry Very remote risk of an isolated shower by early evening toward Pembrokeshire. Otherwise, dry all day.
Cloud on the hills?	Cloud not expected
Chance of cloud free summits?	100%
Sunshine? Air clarity (below cloud)	Widespread strong sunshine; beware sunburn, dehydration and heatstroke. Low level haze, but excellent visibility on high ground.
How Cold? (at 750m)	19C rising to 23C by mid-afternoon, remaining warm overnight on high ground.
Freezing Level	Well above the summits. (Valley temperatures approaching 30 to 32C in the afternoon, hottest east Wales.)

All mountain areas of Britain from Sunday, 13 July, 2025

Lowering pressure from southwest late Sunday into Monday bringing increasing risk bursts of rain and thunderstorms to start the new week, strong and gusty southerly winds. Temperatures will cool towards average. Pressure goes slack and winds fall light into midweek. A risk of heavy rain moving across England and Wales in particular on Tuesday. Low pressure is likely to be more common in the extended outlook with slow-moving areas of showery rain, some thundery bursts locally, interspersed with drier days.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
