General Summary for Tuesday, 22 July, 2025

British Mountain Summary:

Based on forecast chart for noon 22 July, 2025

Drizzly and dull for west Scotland, rain and cloud increasingly breaking in the east with some breaks to tops. Patchy rain and morning fog across most of England and Wales too, cloud tending to lift though most tops likely remain in cloud. Cloud and drizzle will linger on west slopes of Lakeland and Wales.

Headline for Brecon Beacons

Patchy rain and fog, improving; likely staying dull western areas

Detailed Forecast for Tuesday, 22 July, 2025

How windy? (On the summits)	West to northwesterly 15-20mph. Trending northerly as night falls.
Effect of wind on you?	Fairly small, occasional uncomfortable gusts over high tops. Feeling cool.
How wet? (Precipitation and its impact)	Scattered showers drift east, fading later Rain most frequent western hills and the Cambrians in the morning, scattered showers spreading eastwards during day. Some fine drizzle drifting around high tops for a time. Becoming substantially dry into evening.
Cloud on the hills?	Mostly western hills, lifting elsewhere Banks of cloud over higher slopes in the morning, more extensive above 500-600m in west Wales - quite persistent into afternoon. Lifting toward or above many summits further south/east, westernmost summits will struggle to clear.
Chance of cloud free summits?	60%
Sunshine? Air clarity (below cloud)	Little or no sun. Visibility good below cloud, but reduced at times during rain.
How Cold? (at 750m)	10 to 12C, always warmest in the east. Little change through the day. Feeling like 5 to 7C in the wind.
Freezing Level	Above the summits

	Wednesday 23 July	Thursday 24 July
How windy? (On the summits) Effect of wind on you?	Northwesterly 15-20mph, tending to be lighter in the east. Into evening, winds shifting northerly, 25mph. Fairly small most of the day, some uncomfortable winds picking up as evening approaches.	North to northwesterly 10-15mph. High tops may see some stronger gusts. Fairly small, occasionally gusty over high tops and ridges.
How wet? (Precipitation and its impact)	Rain drifts east, becomes patchy Steady rain on western mountains in the morning, tending to break and drift east. Late in the day, some bursts of rain may form on eastern slopes.	Little or no rain Small chance of local spots of light rain east Wales late in the day.
Cloud on the hills? Chance of cloud free summits?	Most hills clearing, cloud lingers west Fairly extensive cloud onto western Beacons and the Cambrians in the morning. Further east, more isolated banks on high terrain - mountains east and south of Pen y Fan largely clear. Cloud tending to clear most summits afternoon, though banks will cling to 50% becoming 80%	Morning cloud lifts off summits Most tops in cloud in the morning, more extensive over high terrain on western hills. Cloud soon lifts and breaks for mostly clear summits. Western Beacons and Cambrian tops may see occasional banks drifting around. Soon 80%
Sunshine? Air clarity (below cloud)	Mostly cloudy at dawn, patches of sun increasingly frequent as the day goes. Excellent visibility.	Patchy sun becoming frequent. Excellent visibility.
How Cold? (at 750m) Freezing Level	11 to 12C. Eastern hills will rise to 13C. Above the summits	10C rising to 14C eastern mountains. Westernmost hills only rising towards 12C, possibly cooler west Cambrians. Above the summits

All mountain areas of Britain from Wednesday, 23 July, 2025

A changeable outlook through late July with rain affecting all areas at times, most frequent in western Scotland, some settled periods too. Often breezy with near average temperatures.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
