### General Summary for Wednesday, 17 September, 2025

#### British Mountain Summary:

Based on forecast chart for noon 17 September, 2025

Strong upland wind, gale force at times. Persistently damp morning across all west-coastal regions, fading to various extents into the afternoon. Extensive cloud in most areas. Very wet underfoot in England and Wales with streams in spate after heavy overnight rain.

#### Headline for Brecon Beacons

Morning gales, easing slightly; persistently wet

### Detailed Forecast for Wednesday, 17 September, 2025

<b>How windy? (On the summits)</b>	Southwesterly 50mph+ in the morning, easing slightly to 35 to 40mph by midday.
<b>Effect of wind on you?</b>	<b>Difficult conditions in the morning easing to arduous in the afternoon. Feeling blustery and balance affected, particularly on ridges. Marked wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Persistent rain morning, may fade</b> Very wet underfoot and streams in spate after heavy overnight rain. Rain fairly persistent, heavy for a few hours in the morning. Frequent or constant rain will continue for a time, but likely to ease to drizzle or fade completely in the afternoon.
<b>Cloud on the hills?</b>	<b>Fairly extensive</b> Nearest coasts, cloud from lowest slopes upwards during rain. Cloud base higher inland but blanketing hills to mid-slopes during rain. Chance of lifting a little in the afternoon.
<b>Chance of cloud free summits?</b>	<b>10%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Generally overcast, varied layers of cloud. Visibility reduced by rain, at times poor; some possible improvement if rain eases.
<b>How Cold? (at 750m)</b>	13C. Feeling around 0 to 5C in the wind, nearer freezing in the morning.
<b>Freezing Level</b>	Above the summits

**All mountain areas of Britain from Thursday, 18 September, 2025**

Extensive rain and gales into midweek, likely wettest on west-coastal regions. Areas of rain and showers frequently in the forecast later in the week. Temperatures near-average, but feeling cool when exposed to wind. A chillier northwesterly may emerge by next weekend, briefly dropping near freezing on the highest Scottish tops. Indications then favour higher pressure at least briefly expanding northwards early next week for some drier days, but unlikely to settle down for long.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
