|                                                                            |                                                                                                                                                                                                                                                                                          |
|----------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b><br><br><b>Effect of wind on you?</b>    | North-northwest 15-20mph at dawn, soon dropping to 10mph or less through middle of day into afternoon, later starting to increase west-southwesterly, 15-20mph up to dusk, eventually 40mph into night.<br><br><b>Mostly small during daytime, then deteriorating onward into night.</b> |
| <b>How wet?</b><br>(Precipitation and its impact)                          | <b>Dry most places until later in night</b><br>An odd early light shower near Pembrokeshire coast, otherwise all daytime dry. Well into night, rain developing from west, snow on higher terrain for a time.                                                                             |
| <b>Cloud on the hills?</b><br><br><br><b>Chance of cloud free summits?</b> | <b>None on most hills</b><br>Most hills clear all day.<br>Early patches may graze Preseli hills.<br>During afternoon, some patches may form on slopes elsewhere near west coast.<br><br><b>90%</b>                                                                                       |
| <b>Sunshine?</b><br>Air clarity (below cloud)                              | Sun through high cloud, tending to thicken from west, may become obscured later. Visibility excellent, possible mist or haze in some valleys.                                                                                                                                            |
| <b>How Cold? (at 750m)</b><br><br><b>Freezing Level</b>                    | -1C, slight rise to around 0C afternoon, then slightly higher into night.<br><br>Terrain widely frozen in morning, all day out of sunlight. General rise toward 700m; then into night just above freezing to the tops.                                                                   |

**All mountain areas of Britain from Saturday, 22 November, 2025**

Changes into the weekend as less cold Atlantic air moves in, but higher mountain terrain at least in Scotland staying frozen with snow cover. A complex area of low pressure circulates over Britain through the weekend, retreating to leave briefly northeasterly winds by Monday; areas of rain and some upland snow, mainly Scotland and high tops in northern England. Winds will vary markedly, some lulls, but risk periods of gales. A brief ridge of high pressure gives a lull by Tuesday, then a shift to milder southwesterlies is likely to bring spells of rain and some thawing to higher levels.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
