### General Summary for Friday, 28 November, 2025

#### British Mountain Summary:

#### Based on forecast chart for noon 28 November, 2025

Stormy conditions over Scottish mountains, easing only toward dusk; frequent or persistent rain and hill snow, heaviest western mountains. Severe gales high tops England & Wales, squally stormy gusts for a time with heavy bursts of rain. Risk of hail and isolated thunder, mainly western areas.

#### Headline for Brecon Beacons

Gales, severe at times high tops. Showery bursts with hail.

### Detailed Forecast for Friday, 28 November, 2025

|                                                   |                                                                                                                                                                                                                                     |
|---------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southwesterly 35 to 45mph, sudden powerful squalls, gusts toward 60mph.                                                                                                                                                             |
| <b>Effect of wind on you?</b>                     | <b>Arduous conditions with significant wind chill and buffeting. Particularly gusty as showers move in.</b>                                                                                                                         |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Showery bursts with hail, chance thunder</b><br>Frequent showers, concentrated into a band that will move through southeastward morning into middle of day, risk hail and isolated lightning. Then ongoing brief showery bursts. |
| <b>Cloud on the hills?</b>                        | <b>Often covering the tops</b><br>Bases varying, but will often descend onto the tops, and fairly extensive for several hours, particularly as showers move through. Best breaks in the east.                                       |
| <b>Chance of cloud free summits?</b>              | <b>40%</b>                                                                                                                                                                                                                          |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | A little sun coming through in west, more common in east away from showers. Visibility sometimes poor due to rain, intermittently good.                                                                                             |
| <b>How Cold? (at 750m)</b>                        | 3C.<br>Wind chill feeling like -12C.                                                                                                                                                                                                |
| <b>Freezing Level</b>                             | Above the tops                                                                                                                                                                                                                      |

**All mountain areas of Britain from Saturday, 29 November, 2025**

Colder over the weekend with the mountains near or below freezing point, including frost into glens in Scotland by Saturday night. A small scale low on Saturday most likely affects England and Wales bringing rain , upland snow and a core of strong winds for a time. Sunday then mostly dry, bright and cold. Next week, Atlantic lows passing across or just north of Britain will bring frequent rainfall to western mountains together with upland gales. A mix of chilly westerly air and some milder southwesterlies. Freeze-thaw cycles, with periods of fresh snow mostly for Scottish hills, briefly high tops elsewhere.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
