General Summary for Sunday, 7 December, 2025

British Mountain Summary:

Based on forecast chart for noon 7 December, 2025

Patchy rain in western areas early, drier east though lots of cloud over summits; some clear tops central and south Pennines. Winds soon begin to strengthen widely, quickest in Wales and reaching gale force here afternoon. Rain also arrives from the west afternoon, spreading widely into evening.

Headline for Brecon Beacons

Blustery, afternoon gales with rain setting in

Detailed Forecast for Sunday, 7 December, 2025

How windy? (On the summits)	Southerly 20-25mph from dawn, soon strengthening, reaching 35-45mph around dusk with a west-southwesterly trend (some variability); gusts reaching 50mph+ for a time around and after dusk.
Effect of wind on you?	Conditions soon deteriorate to strenuous walking over higher terrain, further deteriorating with a risk of difficult conditions and challenging mobility later. Significant wind chill.
How wet? (Precipitation and its impact)	Patchy rain, spreading widely afternoon Occasional patches of rain drifting from the west in the morning. Rain sets in more widely through afternoon into evening with a risk of heavy falls on western slopes. Rain will break as night progresses.
Cloud on the hills?	Extensive Shrouding the hills widely, with banks of cloud from low to mid elevations upward.
Chance of cloud free summits?	Less than 10%
Sunshine? Air clarity (below cloud)	Generally cloudy and misty, poor visibility likely most hills.
How Cold? (at 750m)	8C, fairly small variation with height and rising a degree higher during the day. A sharp drop from dusk into night, lowering to 6C. Feeling below freezing in the wind, near -5C if speeds increase.
Freezing Level	Above the summits.

[illegible]

All mountain areas of Britain from Monday, 8 December, 2025

Generally unsettled into the week with areas of low pressure moving in from the Atlantic on prevailing southwesterly winds. Temperatures relatively mild, higher tops in the Highlands intermittently just below freezing point; expect periods of thawing even up to these tops. Day-to-day weather detail will be uncertain even in short-range as complex systems develop - a series of frontal systems bringing spells of rain, at times more widespread and heavy - any snowfall mostly confined to highest tops in Scotland; also showers at times with hail mostly near western coasts. Wind speeds will also vary, often blustery with periods of gales or severe gales on tops, but local lulls too.

Forecast issued at 16:18 on Saturday, 6 December, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
