General Summary for Friday, 12 December, 2025

British Mountain Summary:

Based on forecast chart for noon 12 December, 2025

Increasingly blustery north England and Scotland, gales over Scottish Highlands; lighter wind Pennines and Wales. Early patchy rain over east Scotland and the Pennines soon clears, slowest south Pennines; many hills then cloud-free. Scattered showers onto west coasts, most frequent and heavy west-central Scotland.

Headline for Brecon Beacons

Some showers south and west; often clear north slopes

Detailed Forecast for Friday, 12 December, 2025

How windy? (On the summits)	Westerly 20-25mph most of the day; some variable direction, in the morning.
Effect of wind on you?	Fairly small, but winds may be uncomfortable at times in exposure.
How wet? (Precipitation and its impact)	A few showers, mostly south and west slopes Patchy rain on eastern hills at dawn soon clears. Scattered showers drift onto southern slopes, mostly west of Merthyr Tydfil.
Cloud on the hills?	Mostly high tops and west slopes Extensive cloud before dawn soon breaks, a few ragged patches leftover at various elevations though these fading. Caps will come and go over high terrain, most frequent and prolonged on southern slopes, particularly in the west.
Chance of cloud free summits?	40%; 60% eastern hills
Sunshine? Air clarity (below cloud)	Cloudy skies early break, best of sun on northern slopes though weakened by high cloud. Excellent visibility early, a haze building near the coasts.
How Cold? (at 750m)	Up to 6C on eastern mountains around dawn, soon widely 4C most of the day. Feeling below freezing in direct wind.
Freezing Level	Above the summits

[illegible]

All mountain areas of Britain from Saturday, 13 December, 2025

Staying unsettled through the weekend and next week as southwesterly winds prevail and low pressure systems pass to the northwest of Scotland; sustained gales over the mountains, severe or stormy for periods. Rainfall will be frequent and heavy for periods, sometimes showery with hail in the west. Expect very wet ground conditions and further flooding of streams and some rivers. Best chance for dry and bright periods central and south Pennines, though these fleeting. Mild for the time of year, temperatures only just below freezing intermittently on higher Scottish tops, even here will experience spells above freezing with thawing, any lying snow patchy, but beware some icy surfaces on the very highest tops where some refreezing occurs.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
