General Summary for Sunday, 28 December, 2025

British Mountain Summary:

Based on forecast chart for noon 28 December, 2025

High pressure brings dry and sunny conditions to the Highlands with little wind and the mountains clear, although some fog in the glens. Elsewhere, an east wind will continue to feed cloud into the Scottish Borders, N Pennines, and east Wales with scope for spots of drizzle. Still dry and sunny toward west coast.

Headline for Brecon Beacons

Cloud covering eastern hills. Well broken cloud in west with sun. Gusty east wind.

Detailed Forecast for Sunday, 28 December, 2025

How windy? (On the summits)	Easterly 15 to 25mph, some stronger gusts possible around higher mountains.
Effect of wind on you?	Fairly small, but noticeably blustery and gusty around exposed tops and ridges, giving marked wind chill.
How wet? (Precipitation and its impact)	Mostly dry Scope for local patches of drizzle or snow grains from the cloud sheet.
Cloud on the hills?	Cloud capping upper slopes. Cloud sheet will graze higher slopes above 600-700m occasionally, mainly east of Brecon. Well broken cloud west of Brecon.
Chance of cloud free summits?	70% in west, 30% in east.
Sunshine? Air clarity (below cloud)	Sun best toward west coast, extensive cloud elsewhere. Visibility very good, some distant haze.
How Cold? (at 750m)	0C. Feeling like -7C directly in the wind.
Freezing Level	Near or just below freezing above 700m, also frost some sheltered valleys in morning.

Brecon Beacons - Looking Ahead

	Monday 29 December	Tuesday 30 December
How windy? (On the summits)	Northeasterly 10 to 15mph, but tending to lift to 15 to 25mph through the day.	East to north-easterly 15 to 25mph
Effect of wind on you?	Mostly small, but increasingly considerable wind chill where exposed to the wind.	Fairly blustery at times with marked wind chill.
How wet? (Precipitation and its impact)	No precipitation expected	No precipitation expected
Cloud on the hills?	Banks mostly across eastern hills. Banks of low cloud may affect eastern hills with bases around 500-700m. Further west, much patchier cloud will the mountains mostly clear.	Patches confined to the east. Patches or banks covering tops in east Wales, but may tend to lift off through day. Mostly clear in the west.
Chance of cloud free summits?	80% in west, 40% in east.	70%
Sunshine? Air clarity (below cloud)	Cloudiest in the east, best sun in the west. Visibility mostly very good outside of any precipitation.	Broken cloud and sun. The sun best in the west. Visibility very good or excellent.
How Cold? (at 750m)	Around 0C	-1C
Freezing Level	Near or just below freezing above 500-700m, also frost some sheltered valleys in morning.	600-700m

Planning Outlook

All mountain areas of Britain from Monday, 29 December, 2025

Early next week, high pressure still dominates, but generally colder air becoming entrained into its circulation from the north, which sees lower temperatures on high terrain. Small amounts of precipitation, occasional showers or snow flurries. Later in the week, a stronger and colder northerly may develop with snow and hail showers becoming frequent in the north and down coastal extremities elsewhere.

Forecast issued at 14:40 on Saturday, 27 December, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
