General Summary for Saturday, 25 April, 2026

British Mountain Summary: Based on forecast chart for noon 25 April, 2026

Low fog in north and east Scotland in the morning, lifting and breaking, may linger in eastern areas; chilly here too for several hours. Often sunny England and Wales with warm temperatures; some high cloud around, but beware sunburn risk. Later cooling in southeast Scotland and N Pennines. Negligible wind.

Headline for Brecon Beacons

Warm sunshine, some high cloud; cool valleys early

Detailed Forecast for Saturday, 25 April, 2026

How windy? (On the summits)	Variable less than 10mph.
Effect of wind on you?	Negligible.
How wet? (Precipitation and its impact)	No rain expected
Cloud on the hills?	None expected
Chance of cloud free summits?	Practically certain
Sunshine? Air clarity (below cloud)	Extensive sunshine, some high cloud around, occasionally thickening and weakening the sun. Visibility very good, slight low-level haze, particularly towards the south coast.
How Cold? (at 750m)	10 or 11C, rising slightly, locally 13C where sunniest.
Freezing Level	Above the summits. Patchy frost at dawn sheltered valleys of east Wales.

Brecon Beacons - Looking Ahead

	Sunday 26 April	Monday 27 April
How windy? (On the summits) Effect of wind on you?	South-southwesterly 10-15mph, up to 20mph early in the day. Trending variable in direction and towards lower speeds. Mostly small, through a notable breeze in the morning, some gustiness too.	Northerly 10-15mph; may shift northeasterly afternoon, notable gusts to 20mph. Fairly small, though some inconvenient gusts over high terrain at times.
How wet? (Precipitation and its impact)	Risk scattered showers, likely dry Local showers here and there, the showers generally light and fleeting; most hills stay dry.	Scattered showers, risk heavy afternoon Scattered showers here and there, greatest risk over eastern hills where may become heavy afternoon.
Cloud on the hills? Chance of cloud free summits?	Likely cloud-free Patchy mist in easternmost valleys, this soon dissipating after sunrise for cloud-free hills. 90%	Soon mostly clear Banks of cloud at various elevations from dawn, lifting to mostly 800-900m and up through morning and likely breaking off the summits. Some risk of caps returning to high tops in afternoon showers. Rising to 80%
Sunshine? Air clarity (below cloud)	Often sunny, though weakened by high cloud, which may thicken. Very good visibility.	Mostly sunny until afternoon, then a patchwork of cloud and sun. Good visibility, but a lingering haze.
How Cold? (at 750m) Freezing Level	10 or 11C, may rise a degree. (Starting several degrees cooler in the valleys, rising towards 20C.) Above the summits.	7 to 10C. Above the summits.

Planning Outlook

All mountain areas of Britain from Sunday, 26 April, 2026

High pressure remains dominant this weekend and into next week: regularly sunny and pleasantly warm days; summit temperatures often at or above 10C, many valleys will warm up toward 20C afternoon. Risk of sunburn in strong sunshine and very dry springtime ground conditions with high risk of wildfire. Risk of showers Sunday and Monday, which could be heavy Monday, some risk of thunderstorms developing in England, though confidence is low. The middle of next week remains settled with sunshine, patchy dawn mist that soon fades. An easterly wind establishes in Wales from mid-week, then a rising risk of wind pushing northward with rain following. Long-term detail is very uncertain, but a trend towards cooler, more unsettled weather is indicated in early May.
