General Summary for Saturday, 31 October, 2026

British Mountain Summary:

Based on forecast chart for noon 31 October, 2026

Rain and low cloud affects the northwestern Highlands much of the day, plus blustery winds on some high terrain. Drier further inland/east in Scotland, best cloud breaks N/E of Cairngorms. England and Wales dry with light winds; morning fog on low ground, but the hills sunny above an inversion.

Headline for Brecon Beacons

Light wind, morning fog on low ground, hills sunny.

Detailed Forecast for Saturday, 31 October, 2026

How windy? (On the summits)	Southerly 10mph or less.
Effect of wind on you?	Negligible
How wet? (Precipitation and its impact)	No rain expected Some dampness if in early low-level fog in east.
Cloud on the hills?	Valley fog largely clearing Fog in some valleys and lower slopes from dawn into morning, most extensive south and eastern areas, very little toward west. Most hills above the fog layer, which tends to break up as the day goes on, may lift into patchy cloud.
Chance of cloud free summits?	90% (tops above fog in morning)
Sunshine? Air clarity (below cloud)	Sunshine breaking through early fog on low ground, where staying hazy. Widely sunny all day with superb visibility higher slopes.
How Cold? (at 750m)	8C.
Freezing Level	Above the summits.

Brecon Beacons - Looking Ahead

	Sunday 1 November	Monday 2 November
How windy? (On the summits) Effect of wind on you?	North to northeasterly 20mph, at times 25mph over higher exposed terrain. Fairly small effect on walking, but noticeably breezy and feeling rather chilly over the tops.	East to northeasterly 20 to 25mph, gusty in places around higher tops, local 30mph and tending to rise a little during day. Feeling noticeably breezy and chilly on high terrain. Ease of walking more affected locally in gusty areas.
How wet? (Precipitation and its impact)	Likely largely dry Chance of a little drizzle developing mainly over eastern mid-Wales, otherwise likely dry.	Rain not expected
Cloud on the hills? Chance of cloud free summits?	Mix of low fog and some cloud banks From dawn, fog mostly in valleys and lower hill slopes, with high tops above this for a time, but banks of low cloud likely to drift onto higher terrain, mostly in east. Southwestern areas clearer. 50%	Little if any Patches sometimes grazing higher slopes, but most cloud often above hills. 80%
Sunshine? Air clarity (below cloud)	Areas of fog may be confined to lower ground at first, sunshine on hills, but then may cloud over from north.	Patchwork of sun, best in west. Visibility very good, some haze lower down.
How Cold? (at 750m) Freezing Level	6 or 7C. Feeling near 0C in the breeze on tops. Above the summits	3 to 5C. Feeling nearer -5C directly in wind. Above the summits, but patchy frost in valleys at first, also some sheltered higher slopes.

Planning Outlook

All mountain areas of Britain from Sunday, 1 November, 2026

High pressure centred over Scotland will persist during early November bringing settled conditions. Generally dry weather, but some areas of misty dampness and regular fog on low ground, some cloud banks on hills but also inversion conditions on high tops, particularly Scotland. Overnight frost in glens will be common, plus some frost pockets for sheltered high terrain, whilst many summits will stay often just above freezing point. Light winds for several days into next week for Scotland, but stronger easterlies are likely for England and particularly Wales which would push cloud banks higher up here during the week ahead.

Forecast issued at 16:00 on Friday, 30 October, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
