General Summary for Thursday, 5 November, 2026

British Mountain Summary:
Based on forecast chart for noon 5 November, 2026

Extensive fog due to low cloud and patches of drizzle, but dry most western mountains where cloud base highest. Little wind N Scotland, but from near the central belt of Scotland southwards, blustery higher slopes, and in places very gusty west of major ridges.

Headline for Brecon Beacons

Gusty wind. Cloudy, small risk drizzle. Fog, higher areas, particularly morning.

Detailed Forecast for Thursday, 5 November, 2026

How windy? (On the summits)	Easterly 25 to on higher slopes 30 or locally 35mph. Very gusty some lower slopes.
Effect of wind on you?	**Will impact ease of walking, particularly balance in places. Marked wind chill.**
How wet? (Precipitation and its impact)	**Risk pockets of drizzly rain, mainly or only east Wales** A few, probably brief, patches of drizzly rain east Wales. Little if any west Wales.
Cloud on the hills?	**Very extensive, though cloud may be above western areas** Persistent fog above around or above 600m. In east Wales, particularly near drizzle in morning, patches near 300m.
Chance of cloud free summits?	**40%**
Sunshine? Air clarity (below cloud)	Extensively cloudy. Visibility very good although slight haze.
How Cold? (at 750m)	4C. In the wind will feel as cold as minus 2C.
Freezing Level	Above the summits

Brecon Beacons - Looking Ahead

	Friday 6 November	Saturday 7 November
How windy? (On the summits)	Easterly, 15mph. Will tend to ease through day.	Direction varied 10mph or less.
Effect of wind on you?	**Small**	**Negligible**
How wet? (Precipitation and its impact)	**Little or no rain.** Most or all areas dry. But risk of a little damp weather with pockets of very light rain west Wales.	**Risk patches of drizzly rain** Particularly mid and east Wales risk drizzly rain for an hour or two - total rainfall small.
Cloud on the hills?	**Extensive, particularly more eastern hills morning** Broadly, cloud base will rise westwards and through the day. Particularly in rain, pockets of or extensive cloud lower slopes east Wales, where base 500m or above by midday. Cloud mostly above western hills, particularly from midday.	**May break off at least some higher areas.** Confidence low: Low cloud may affect much of region above 200-400m. However, there may be breaks, possibly substantial to higher slopes, particularly west Wales.
Chance of cloud free summits?	**50%**	**30%**
Sunshine? Air clarity (below cloud)	Patches of sunshine, mainly west Wales. Good visibility, but misty in rain	Cloudy or perhaps dull. Hazy or after dawn foggy; misty in drizzle.
How Cold? (at 750m)	4C	4C
Freezing Level	Above the summits.	Above the summits.

Planning Outlook

All mountain areas of Britain from Friday, 6 November, 2026

High pressure will continue to be the main influence through the next week, particularly W & NW Highlands where extensively dry and wind often light. However, generally fog and low cloud may well never clear most mountains under the light wind. There will also be patches of drizzly rain, although total rainfall small.

Forecast issued at 12:15 on Wednesday, 4 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
