General Summary for Saturday, 7 November, 2026

British Mountain Summary:
Based on forecast chart for noon 7 November, 2026

Extensively cloudy and dull, some drizzle or light rain, but total amounts small. Areas of fog in places from low terrain upward and cloud banks across hills. Some highest Scottish summits may just poke out above cloud, but local variations. Generally light wind.

Headline for Brecon Beacons

Low cloud, tending to lift a little from west.

Detailed Forecast for Saturday, 7 November, 2026

How windy? (On the summits)	Direction varied 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Patches of drizzly rain, a rare shower** Particularly mid and east Wales patchy drizzly rain for an hour or two - total rainfall small. An isolated light shower possible for more southern areas in the afternoon.
Cloud on the hills?	**Fairly extensive fog across hills, some breaks form** Low cloud affect much of region above 200-400m up to the tops in the morning. However, the base tends to lift and some breaks, in places substantial to higher slopes, particularly west Wales and into the afternoon.
Chance of cloud free summits?	**30%**
Sunshine? Air clarity (below cloud)	Cloudy or dull and extensively misty or foggy east Wales, some improvement. A little sun here and there but still hazy west Wales.
How Cold? (at 750m)	4C
Freezing Level	Above the summits.

Brecon Beacons - Looking Ahead

	Sunday 8 November	Monday 9 November
How windy? (On the summits)	Variable or southerly 10mph or less.	East-southeasterly 15-20mph from dawn, rising during day to 25-30mph and increasingly gusty; stronger after dark.
Effect of wind on you?	**Negligible**	**Increasingly noticeable and starting to affect comfortable walking over exposed terrain; marked wind chill developing.**
How wet? (Precipitation and its impact)	**Patchy drizzle** Local pockets of light or very light drizzle.	**Rain very unlikely** Locally feeling damp where in fog. Late in the day, chance of a little patchy rain moving in from the south - more likely overnight or into early Tuesday.
Cloud on the hills?	**Extensive; cloud base sometimes very different on nearby slopes** Some local variations, but cloud likely extensive highest slopes. Lower down, fog clinging to many slopes from valleys up most or perhaps all day, whilst others become fog free or are between layers of cloud.	**Low cloud fairly widely** Some uncertainty, but cloud likely covering most high terrain all day, some lower fog banks early morning mainly east Wales. Local breaks may form toward western slopes, but rarely clearing summits.
Chance of cloud free summits?	**10%**	**20%**
Sunshine? Air clarity (below cloud)	Cloudy or dull with extensive fog - but generally becoming brighter with glimpses or patches of sun developing.	Mostly little if any sun, may break through in west, but a thickening veil of high cloud. Likely hazy or foggy, particularly east and southern areas.
How Cold? (at 750m)	6C	4 or 5C, may rise slightly toward west. As wind increases, feeling below freezing, later nearer -5C on exposed tops.
Freezing Level	Above the summits.	Above the summits. Local frost pockets in sheltered valleys around dawn.

Planning Outlook

All mountain areas of Britain from Sunday, 8 November, 2026

High pressure persists into the start of the new week with light winds for much of Scotland, though an easterly wind will increase for England and Wales. The west and northwest Highlands most extensively dry with cloud breaks and sun. However, disappointing for other areas as 'gloomy' conditions predominate, with patches of light rain and extensive low cloud and fog. Into midweek, an area of low pressure will bring rain and wind in from the southwest but northern Scotland may escape most or all the rain. Late in the week, indications favour a switch to a colder northerly flow for a time in Scotland at least and brings scope for snow showers to northern mountains.

Forecast issued at 15:30 on Friday, 6 November, 2026
