General Summary for Sunday, 8 November, 2026

British Mountain Summary:
Based on forecast chart for noon 8 November, 2026

Patchy drizzle and areas of low cloud or fog, mostly east and southern Scotland, Pennines and inland across Wales, whilst western regions tend to fare better for cloud breaks and some sun. Very little wind overall. Near freezing on highest Scottish tops.

Headline for Brecon Beacons

Varied cloud and fog, likely becoming clearer, some sun.

Detailed Forecast for Sunday, 8 November, 2026

How windy? (On the summits)	Variable or southerly 10mph or less.
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Rain not expected** Some dampness around fog. Chance of an odd light shower close to the Pembrokeshire coast.
Cloud on the hills?	**Fog and low cloud tending to thin and break** Areas of fog from lower elevations upward in the morning, some fog into valleys and cloud banks higher up, with some slopes between layers for a time. Fog tending to thin, leaving some patches drifting around variably. During afternoon many hills may be clear.
Chance of cloud free summits?	**30%**
Sunshine? Air clarity (below cloud)	Varied cloud or fog - but generally becoming brighter with sun developing increasingly; some haze remains lower down.
How Cold? (at 750m)	6C
Freezing Level	Above the summits. Local pockets of slight frost in valleys early morning.

Brecon Beacons - Looking Ahead

	Monday 9 November	Tuesday 10 November
How windy? (On the summits)	East-southeasterly 20mph from dawn, rising during day to 25-30mph and increasingly gusty; stronger after dark.	Southeasterly 25 to 35mph, gusty in places around major summits and some western downslopes.
Effect of wind on you?	**Increasingly noticeable and starting to affect comfortable walking over exposed terrain; marked wind chill developing.**	**Strenuous walking in exposure, gusty areas making balance difficult at times. Considerable wind chill.**
How wet? (Precipitation and its impact)	**No rain expected until night** Locally feeling damp where in fog. Into night, a little patchy rain moving in from the south, more persistent toward Tuesday dawn.	**Rain fairly persistent** Some uncertainty, but rain likely to affect much of the region throughout the day, may give some steadier or heavier falls particularly south and eastern areas, mixed with drizzle at times.
Cloud on the hills?	**Low cloud fairly widely, breaks west** Cloud likely covering most high terrain all day, some lower fog banks early morning mainly east Wales. Local breaks toward western slopes, some slopes may emerge out of cloud or between banks.	**Extensive** Shrouding the hills likely all day, lowest cloud bases on southern and eastern slopes, may fill in to lower slopes at times. Higher bases to 500-600m in west, local breaks west mid-Wales if drier.
Chance of cloud free summits?	**20%**	**10%**
Sunshine? Air clarity (below cloud)	Mostly little if any sun, may break through in west, but a thickening veil of high cloud. Likely hazy or foggy, particularly east and southern areas.	Overcast and dull, poor visibility fairly widely, but locally brighter toward Cardigan Bay.
How Cold? (at 750m)	4 or 5C, slight rise toward west. As wind increases, feeling below freezing, later nearer -5C on exposed tops.	6C. Feeling like -5C directly in the wind.
Freezing Level	Above the summits. Local frost pockets in sheltered valleys around dawn.	Above the summits.

Planning Outlook

All mountain areas of Britain from Monday, 9 November, 2026

A slack pressure pattern to start the new week over Scotland, maintaining varied low cloud and fog. Lowering pressure to the south and an increasing easterly wind for England & Wales. Rain pushes into Wales on Tuesday, reaching the south Pennines with time, persisting in these areas into Wednesday, but very little extending further northwards. Into the second half of the week, a switch to a colder northerly flow will likely drop the freezing level to 800m increasingly widely for Thursday-Friday, plus frost on low ground. Some snow showers on northern Scottish mountains, but largely dry weather elsewhere. During next weekend, a shift to a less cold Atlantic influence - a changeable mix likely into the following week.

Forecast issued at 15:00 on Saturday, 7 November, 2026
