General Summary for Tuesday, 10 November, 2026

British Mountain Summary:
Based on forecast chart for noon 10 November, 2026

Much of Scotland dry with sunshine; areas of low-level fog and frost. Some showers toward the far north. Fog from lower elevations upward for Pennines and east Wales, but much of northwest Wales and the Lakes have clearer hills. Rain moves into south Wales. Strong easterly winds for Wales.

Headline for Brecon Beacons

Windy, gusty. Fog and low cloud, rain moving in.

Detailed Forecast for Tuesday, 10 November, 2026

How windy? (On the summits)	Southeasterly 25 to 30mph, gusty 35mph in places around major summits and some western downslopes.
Effect of wind on you?	**Strenuous walking in exposure, gusty areas making balance difficult at times. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Rain becomes fairly persistent** Dry at first, but rain develops from south to affect much of the region increasingly, with time steadier or heavier falls particularly southern areas, mixed with drizzly moments, patchier northwards.
Cloud on the hills?	**Extensive, some varied fog in morning** Varied extent of low cloud and fog early in day, eastern areas foggy to low levels, but further west some breaks higher up. Some slopes between layers for a time, but cloud likely to fill in widely to shroud the hills, in places from low slopes up.
Chance of cloud free summits?	**10%**
Sunshine? Air clarity (below cloud)	Overcast and dull, foggy lower areas toward east and south in the morning. Poor visibility fairly widely as rain develops.
How Cold? (at 750m)	4C, to local 6C west. Feeling like -5C directly in the wind.
Freezing Level	Above the summits.

Brecon Beacons - Looking Ahead

	Wednesday 11 November	Thursday 12 November
How windy? (On the summits)	Easterly 25 to 30mph, risk gusty 35mph around higher tops for a time, locally downslope to west; tending to lessen.	Northerly 20 to 30mph.
Effect of wind on you?	**Starting to affect comfortable walking over higher exposed terrain, improving a little. Marked wind chill.**	**Affecting comfortable walking on exposed high terrain, gusts may affect balance. Considerable wind chill.**
How wet? (Precipitation and its impact)	**Rain mostly light, becoming patchy** An area of persistent rain and drizzle from overnight continues into the daytime, but tending to gradually break up, though patchy drizzle likely lingers most of day.	**No precipitation expected most places** Chance of an odd shower over Pembrokeshire.
Cloud on the hills?	**Extensive** Shrouding most hills throughout the day, from some lower elevations up in the south and east of the region. Some breaks emerging mainly western areas into afternoon.	**Little if any** Some cloud may drift over higher slopes from dawn, but all likely to break up.
Chance of cloud free summits?	**20%**	**90%**
Sunshine? Air clarity (below cloud)	Overcast and dull, murky in rain. Some local improvement in visibility if rain fades, mainly in west.	Early patchy cloud clears, then widely sunny. Visibility excellent.
How Cold? (at 750m)	3 or 4C. Feeling like -4 to -7C directly in the stronger wind.	Around 0C. Feeling near -10C directly in the wind.
Freezing Level	Above the summits.	800m or just above. Patchy frost in valleys in morning.

Planning Outlook

All mountain areas of Britain from Wednesday, 11 November, 2026

Dropping colder across all mountains during midweek as the wind shifts northerly and strengthens. Some showery snowfall across the Highlands on Wednesday, otherwise plenty of sunshine and very clear air late this week, for all areas - clearing away fog from early in the week. Into the weekend, as the wind shifts west then southwesterly, less cold air drifts in from the Atlantic bringing more cloud onto western hills - an increasing risk of rain in the west. A changeable outlook into next week with varying temperatures, stronger wind at times, rain and some upland snow possible. Unsettled patterns are more likely to prevail beyond mid-month.
