General Summary for Friday, 13 November, 2026

British Mountain Summary:
Based on forecast chart for noon 13 November, 2026

Under high pressure most mountain areas fine with sunshine. However, progressively north across Scotland, increasing strong westerly wind will bring snow showers to mainly the NW Highlands and low cloud across western mountains. Much terrain frozen - but freezing level rising through day.

Headline for Brecon Beacons

Most terrain frozen. Bright sunshine.

Detailed Forecast for Friday, 13 November, 2026

How windy? (On the summits)	North or northwesterly less than 10mph
Effect of wind on you?	**Negligible**
How wet? (Precipitation and its impact)	**Precipitation not expected**
Cloud on the hills?	**Not expected** Very little if any
Chance of cloud free summits?	**Almost certain**
Sunshine? Air clarity (below cloud)	Bright sunshine. Visibility excellent or superb.
How Cold? (at 750m)	-1C rising to 1C.
Freezing Level	Terrain nearly all frozen morning, but slowly a thaw will set in.

Brecon Beacons - Looking Ahead

	Saturday 14 November	Sunday 15 November
How windy? (On the summits)	Southerly between 15 and perhaps 20mph.	Very low confidence near centres of low pressure: Varied direction, possible marked lull but anticipate up to 45mph.
Effect of wind on you?	**Fairly small.**	**Sometimes small, but zones where wind chill significant and walking difficult - these challenging conditions could set in abruptly.**
How wet? (Precipitation and its impact)	**Risk isolated shower** Small risk of a drizzly shower SW Wales.	**Periods of rain** Areas of rain will circulate within general low pressure, perhaps falling as snow on higher tops late in day - when it will often be dry, although still risk of showers.
Cloud on the hills?	**Mostly confined to higher slopes** Risk Preseli and southern slopes Brecon Beacons of cloud above 450 to 650m at times. Elsewhere, patches some higher slopes, but hills often cloud free.	**Fog extensive, although cloud base likely to rise** Fog in some areas from lower slopes up, and few breaks above 600m. Probably an improvement as most cloud rises to above 750m - timing uncertain.
Chance of cloud free summits?	**70%**	**40%**
Sunshine? Air clarity (below cloud)	Sunshine, perhaps extensive. Hazy westernmost areas; otherwise visibility excellent after fog some valleys morning.	Sunshine occasionally, most likely afternoon. Regions of very poor visibility - but often very good later in day.
How Cold? (at 750m)	0C tending to rise toward 2C through day.	3C
Freezing Level	700m rising above highest summits. Frost valleys morning.	Above the summits.

Planning Outlook

All mountain areas of Britain from Saturday, 14 November, 2026

Pressure will fall over the weekend: a little rain for some western mountains on Saturday, but more widespread rain (snow higher areas Scottish Highlands) on Sunday - albeit the detail for Sunday is unusually uncertain (for a 3 day forecast). Cold often dry conditions will return on Monday, but beyond extensive rain (sometimes snow higher areas) and strong winds probable, although presently Scotland, particularly the Highlands may have only snow showers in the cold air.

Forecast issued at 7:38 on Friday, 13 November, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
