

# Lake District

The entire Lake District National Park, taking in all major summits, including Scafell, Helvellyn, Skiddaw, the Langdales and Old Man of Coniston. Also includes the Howgill Fells east of Kendal (the NW extension of Yorks Dales).

**Wheelwrights Cottages provide a wide range of self-catering accommodation around Langdale and beyond to suit all requirements. Please call us on 015394 37635 for details or go to [www.wheelwrights.com](http://www.wheelwrights.com)**

## General Summary for Monday, 27 July, 2020

### British Mountain Summary:

#### Based on forecast chart for noon 27 July, 2020

Low pressure will track northeast and bring wet conditions widely across many parts with persistent and at times heavy rain accompanied by extensive low cloud and the risk of upland gales across Wales. Uncertainties remain on the northern extent and depth of this low, but the NW Highlands will see the driest conditions.

### Headline for Lake District

A very wet, murky and at times windy day with widespread rain and low cloud.

## Detailed Forecast for Monday, 27 July, 2020

<p><b>How windy? (On the summits)</b></p> <p><b>Effect of wind on you?</b></p>	<p>Low confidence in wind detail: Southerly generally in the range 20 to 30mph, risk a little higher at times tops. May be a period of lighter winds, before conditions veer westerly later in afternoon and perhaps reach 35 to 40mph.</p> <p><b>Be prepared for some periods of buffeting, and perhaps later in the day fairly arduous conditions.</b></p>
<p><b>How wet?</b> (Precipitation and its impact)</p>	<p><b>Very wet</b></p> <p>A very wet day with persistent and often heavy falls of rain. The rain will tend to ease of from the west later in the afternoon and into the evening.</p>
<p><b>Cloud on the hills?</b></p> <p><b>Chance of cloud free summits?</b></p>	<p><b>Widespread low cloud; to lower slopes.</b></p> <p>Widespread low cloud will shroud the hills throughout much of the day with banks forming fairly widely from lower slopes upwards. Later in the afternoon and into the evening, bases will lift and break up leaving patches at varying heights.</p> <p><b>10%</b></p>
<p><b>Sunshine?</b> Air clarity (below cloud)</p>	<p>Little or no sun.</p> <p>Very murky in the rain with poor or very poor visibility. Will improve from the west later.</p>
<p><b>How Cold? (at 750m)</b></p> <p><b>Freezing Level</b></p>	<p>10 or 11C</p> <p>Above the summits.</p>

## Lake District - Looking Ahead

	<b>Tuesday 28 July</b>	<b>Wednesday 29 July</b>
<b>How windy? (On the summits)</b>	Northwesterly 25 to 35mph, perhaps 40mph for a few hours higher tops.	Northwest 20-25mph at dawn will ease to become westerly 5 to 15mph by afternoon.
<b>Effect of wind on you?</b>	<b>Walking fairly arduous across higher slopes with considerable buffeting at times.</b>	<b>Becoming negligible by afternoon.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Scattered showers developing.</b> Likely dry at first, but from mid to late morning, scattered showers will develop. These becoming confined to eastern areas by late afternoon, some heavy here.	<b>Substantially or completely dry</b> Isolated, if any, brief showers.
<b>Cloud on the hills?</b>	<b>Fairly extensive morning, but breaking up.</b> Fairly extensive cloud covering higher slopes through the morning. However, increasingly into the afternoon lengthy breaks will likely develop with many hills clearing outside showers.	<b>Mostly very little</b> A few patches higher tops at first, but these will soon disperse to lead hills widely clear though the day.
<b>Chance of cloud free summits?</b>	<b>60%</b>	<b>70%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Fairly cloudy at first, but patches of sun will increasingly develop.  Visibility mostly very good.	Sunny periods, but high cloud increasing from the west.  Visibility very good.
<b>How Cold? (at 750m)</b>	7 to 9C	6 lifting to 8C
<b>Freezing Level</b>	Above the summits	Above the tops.

**Planning Outlook****All mountain areas of Britain from Tuesday, 28 July, 2020**

Inspection of medium range forecasts (out to a fortnight) from the major weather prediction models continues to suggest areas of low pressure drifting in off the Atlantic will dominate the weather. Rain and fog will be frequent across all mountain areas, but concentrated on western mountains. However, there will be a couple of dry or drier days around the middle of next week as a ridge of high pressure comes through and brings briefly warmer air across many parts around Thursday.

**Forecast issued at 14:57 on Sunday, 26 July, 2020**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2020.
