

Lake District

The entire Lake District National Park, taking in all major summits, including Scafell, Helvellyn, Skiddaw, the Langdales and Old Man of Coniston.

Wheelwrights Cottages provide a wide range of self-catering accommodation around Langdale and beyond to suit all requirements. Please call us on 015394 37635 for details or go to www.wheelwrights.com

General Summary for Sunday, 9 November, 2025

British Mountain Summary:

Based on forecast chart for noon 9 November, 2025

A swathe of rain advances eastwards across all regions during the day, heaviest over south-facing hill groups, patchier northwards across the Highlands, breaking up with time in the west, leaving a few showers, rising cloud bases. Windy, up to gale force high tops, most sustained in Wales.

Headline for Lake District

Windy, lessening later. Wet much of the day, low cloud.

Detailed Forecast for Sunday, 9 November, 2025

How windy? (On the summits)	South-southwesterly 30-35mph soon rising in morning to gusty 40-45mph for several hours through middle of day. Starting to lessen a little during afternoon.
Effect of wind on you?	Walking arduous with marked wind chill. Considerable buffeting will make stability challenging. Some improvement later.
How wet? (Precipitation and its impact)	Soon frequently raining, heavy at times Patchy rain from dawn, soon setting in widely in morning. Heaviest persistent rain on southern fells. Staying wet onward into afternoon, rain may break up a little, but some pulses of heavy rain on and off, clearing later in day. Some further rain develops into night.
Cloud on the hills?	Becoming extensive Cloud covers high tops and southern fells from dawn, banks down to middle slopes. Cloud will fill in more extensively above 600-700m as rain sets in; bases always highest around Blencathra.
Chance of cloud free summits?	50% north at first, lowering to less than 10%
Sunshine? Air clarity (below cloud)	Overcast. Visibility mostly poor as rain and fog set in widely, locally starting good in northeast.
How Cold? (at 750m)	5 to 7C. Feeling like -5C directly in the wind.
Freezing Level	Above the summits

Lake District - Looking Ahead

	Monday 10 November	Tuesday 11 November
How windy? (On the summits) Effect of wind on you?	South to southwesterly 10-20mph. Mostly small.	Southerly, strengthening rapidly from before dawn to 40 to 50mph in morning, reaching 60mph with stronger gusts. Soon arduous walking conditions, increasingly difficult mobility over higher terrain. Marked wind chill despite mild air.
How wet? (Precipitation and its impact)	Soon substantially dry Showery rain from dawn soon clears northward, wet underfoot at first. Occasional showers follow, drifting off the Irish Sea onto southwestern fells.	Rain often heavy Rain widespread throughout the day, sustained heavy falls likely, particularly southwestern areas. Streams in spate, renewed flooding.
Cloud on the hills? Chance of cloud free summits?	Mostly just high and southern fells Fairly extensive at and before dawn but very soon breaking. Banks will cling to high fells and southern slopes above 700-800m, most other fells becoming clear. 20% highest fells and southern slopes, 70% elsewhere	Extensive, lowest south Blanket low cloud across the fells, from lower slopes upward south and southwest areas, 500-600m further northeast across Lakeland. Below 10%
Sunshine? Air clarity (below cloud)	Soon frequently sunny on most fells except just south of highest tops. Excellent visibility.	Overcast and murky, better visibility locally toward north Lakes if drier.
How Cold? (at 750m) Freezing Level	6C Above the summits	5C soon rising from dawn to 7C, reaching 9C from noon; only small fall with height. Feeling nearer -5C directly in the wind. Above the summits

Planning Outlook

All mountain areas of Britain from Monday, 10 November, 2025

A cloudy and wet week ahead as several low pressure cores draw frontal systems across the British Isles. Rain at times extensive and heavy, streams in spate with a risk of flooding, primarily western mountains. Winds start fairly light but soon increase with gales becoming widespread by Tuesday, which may persist for several days. Temperatures remain mild until later in the week when cold air begins pushing into northern Scotland - timing and extent of the arrival of cold air remains uncertain but high terrain of Scotland and possibly northern England may start to see more snow around or after next weekend.

Forecast issued at 8:04 on Sunday, 9 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
