

Lake District

The entire Lake District National Park, taking in all major summits, including Scafell, Helvellyn, Skiddaw, the Langdales and Old Man of Coniston.

Wheelwrights Cottages provide a wide range of self-catering accommodation around Langdale and beyond to suit all requirements. Please call us on 015394 37635 for details or go to www.wheelwrights.com

General Summary for Thursday, 13 November, 2025

British Mountain Summary:

Based on forecast chart for noon 13 November, 2025

Cold northeasterlies for the Highlands, gale-force over mountains early in day. Snow mostly in northern areas. A slow-moving swathe of rain for southern Scotland and northern England, heavy at times. Previous rain eases to patchy light rain in Wales, but beware of flooding - staying mild here.

Headline for Lake District

Varied wind, risk increasing. Raining most or all day.

Detailed Forecast for Thursday, 13 November, 2025

How windy? (On the summits) Effect of wind on you?	Direction and speed will vary considerably during day: Southwesterly at first in south, switching northeasterly, soonest in north, a possible lull for a time, then likely strengthening quickly, up to 30-40mph for periods. Highly variable: fairly small for periods, though expect sudden renewed deterioration of conditions to give significant wind chill and buffeting.
How wet? (Precipitation and its impact)	Persistent rain, some heavy, flood risk Widely raining from dawn into morning, heavy for a few hours, particularly west and north. Rain likely continues all day, but intensity easing, may become patchier afternoon. Very wet underfoot, streams in spate, some flooding.
Cloud on the hills? Chance of cloud free summits?	Extensive, variably breaking Extensive from middle slopes upward for much of morning. Bases will rise to above 600-700m with a chance of becoming broken with brief clear periods on tops, mainly western areas later in day. 20%
Sunshine? Air clarity (below cloud)	Overcast and dull likely all day, skies may brighten a little locally later. Largely poor visibility, though may improve if fog and rain break.
How Cold? (at 750m) Freezing Level	5C, tending to drop later in day toward 2C. Beware feeling like -5C or below if exposed to increase of wind speed. Above the summits. Small risk of lowering to the summits late in the day.

All mountain areas of Britain from Friday, 14 November, 2025

High rainfall with significant flooding expected for Wales by the end of this week, risk flooding too in Peak District. Drier overall across the Highlands. Strong to gale force easterlies later this week, then northerlies are expected to dominate onward into next week. Colder air extends to all areas, staying below freezing over higher mountains most likely throughout next week to 10 days. Some accumulations of snow over Scottish mountains, initially mostly northern areas, possibly more widely across all mountain areas during next week - Tuesday-Wednesday in particular, but lower confidence of forecast detail by then.

Forecast issued at 16:30 on Wednesday, 12 November, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
