General Summary for Friday, 21 November, 2025

British Mountain Summary:

Based on forecast chart for noon 21 November, 2025

Terrain widely frozen after hard frost; snow cover across much upland terrain, or more substantial to lower slopes northern Highlands. A front moves into Scotland, snow then rain in west, cloud lowering. Elsewhere dry, sunshine weakening. Wind strengthening to gale force Scottish mountains.

Headline for Lake District

Becoming windier later. Dry with sunshine, high cloud.

Detailed Forecast for Friday, 21 November, 2025

How windy? (On the summits)	Northwest shifting southwesterly, strengthening during daytime from 15mph or less in morning, to by dusk 25-30mph, into evening 40mph.
Effect of wind on you?	Fairly small morning, but expect increasing wind chill to develop, conditions likely deteriorating into evening.
How wet? (Precipitation and its impact)	Dry until night A covering of snow over most higher terrain, less so on southernmost fells. All daytime dry. Into night, rain developing from west, heavier further into night; snow on higher terrain for a time.
Cloud on the hills?	Little if any Hills widely clear most or all daylight. During afternoon, some patches may form on slopes near coast.
Chance of cloud free summits?	80%
Sunshine? Air clarity (below cloud)	Sun through high cloud, tending to thicken from west, may become obscured later. Visibility excellent, possible mist or haze in some valleys.
How Cold? (at 750m)	-1C, lifting just above 0C afternoon mainly coasts; then +1 or 2C into night. If wind increases, feeling near -10C.
Freezing Level	Much terrain frozen all day inland to lower slopes, rising to 700-800m near coast, then into night widely just above freezing to upper slopes.

All mountain areas of Britain from Saturday, 22 November, 2025

Changes into the weekend as less cold Atlantic air moves in, but higher mountain terrain at least in Scotland staying frozen with snow cover. A complex area of low pressure circulates over Britain through the weekend, retreating to leave briefly northeasterly winds by Monday; areas of rain and some upland snow, mainly Scotland and high tops in northern England. Winds will vary markedly, some lulls, but risk periods of gales. A brief ridge of high pressure gives a lull by Tuesday, then a shift to milder southwesterlies is likely to bring spells of rain and some thawing to higher levels.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
