

Lake District

The entire Lake District National Park, taking in all major summits, including Scafell, Helvellyn, Skiddaw, the Langdales and Old Man of Conistone.

Wheelwrights Cottages provide a wide range of self-catering accommodation around Langdale and beyond to suit all requirements. Please call us on 015394 37635 for details or go to www.wheelwrights.com

General Summary for Monday, 29 December, 2025

British Mountain Summary:

Based on forecast chart for noon 29 December, 2025

Chilly northeasterly winds with extensive cloud with patchy precipitation locally. Best breaks and sun western Scotland, also toward west in England and Wales. As a cold front edges south, cloud may break up more widely later for the Highlands with colder conditions developing on the hills.

Headline for Lake District

Chilly northeast wind. Patchy cloud northeast, clearer west.

Detailed Forecast for Monday, 29 December, 2025

How windy? (On the summits)	Northeasterly 10 to 15mph, but tending to lift to 15 to 25mph through the day. May lift to 30mph over tops.
Effect of wind on you?	Mostly small, but increasingly considerable wind chill where exposed to the wind and rather gusty.
How wet? (Precipitation and its impact)	Largely dry Chance of odd spots or snow grains on higher fells if cloud rolls across.
Cloud on the hills?	Occasionally on tops north/east Cloud patches mainly confined to eastern and northeastern fells with bases around 600-700m. Well broken cloud further west where fells more often clear.
Chance of cloud free summits?	50% in east, 80% in west.
Sunshine? Air clarity (below cloud)	Broken cloud and sun, best in the west. Visibility mostly very good.
How Cold? (at 750m)	Around 0C, small change in temperature with height. Feeling like -7C as wind increases.
Freezing Level	Freezing level poorly defined, generally much of terrain frozen. Frost into valleys and corries in the morning.

Lake District - Looking Ahead

	Tuesday 30 December	Wednesday 31 December
How windy? (On the summits) Effect of wind on you?	Northerly 10mph Small	North-westerly backing westerly 15 to 25mph, increasing to 25 to 35mph through the day. Be prepared for increasingly blustery conditions with considerable wind chill and buffeting.
How wet? (Precipitation and its impact)	No precipitation expected	Mostly dry Dry much of day, risk patchy precipitation later, snow flurries on upper slopes.
Cloud on the hills? Chance of cloud free summits?	Mostly very little Ragged patches some upper slopes in the north and east. Tending to lift off through the day. Otherwise, fells mostly clear. 80%	Lowering onto fells from west. Fells starting clear, but increasingly low cloud will move in from the west to cover upper slopes or tops towards and into the afternoon. Perhaps to mid slopes in west. 80% at first, lowering to 30%
Sunshine? Air clarity (below cloud)	Broken cloud and sun, may be mostly cloudy in the east. Visibility very good or excellent.	Bright start with sun through high cloud, but cloud building from west. Visibility mostly very good or excellent. Turning misty and murky later.
How Cold? (at 750m) Freezing Level	-1 or -2C 500-600m	Around -1C. Feeling closer to -8C in the strongest winds. All levels at first, following widespread frost into valleys, but lifting to 500-600m.

Planning Outlook**All mountain areas of Britain from Tuesday, 30 December, 2025**

Up until end of the year, high pressure still dominates.

Significant change from New Year's Day as a cold front introduces, a much colder and strong northerly giving severe wind chill with temperatures well below average for the first week to the New Year with frequent and heavy snow showers moving into northern areas and running down coastal extremities with significant accumulations. Elsewhere, lots of dry and sunny weather, although occasional organised bands of snow will feed south at times in the Arctic airflow. All terrain becoming frozen, with scope for very low valley temperatures over snow cover when northerly flow eases.

Forecast issued at 7:00 on Monday, 29 December, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
