

Lake District

The entire Lake District National Park, taking in all major summits, including Scafell, Helvellyn, Skiddaw, the Langdales and Old Man of Coniston.

Wheelwrights Cottages provide a wide range of self-catering accommodation around Langdale and beyond to suit all requirements. Please call us on 015394 37635 for details or go to www.wheelwrights.com

General Summary for Saturday, 13 June, 2026

British Mountain Summary:

Based on forecast chart for noon 13 June, 2026

Chilly and showery west Scottish highlands, fewer showers east but several afternoon hours of more widespread rain, later easing. Some early showers from south Scotland to north Wales, largely fading with sun breaks; south Wales is dry and brighter. Strong wind widely, easing Wales and north Scotland.

Headline for Lake District

Strong wind; early showers largely fade, some sun glimpses

Detailed Forecast for Saturday, 13 June, 2026

How windy? (On the summits)	West shifting northwesterly 30-35mph, sometimes reaching 40mph over tops, particularly early, and some variability throughout the day.
Effect of wind on you?	Strenuous walking with wind chill all day, moments of more arduous walking in exposure when maintain stability will require notable effort on tops and ridges.
How wet? (Precipitation and its impact)	Light patchy rain, well-scattered Patchy rain drifting across the fells from the northwest from time to time, more often not raining and amounting to little. Rain may be more frequent for a few early hours.
Cloud on the hills?	Lifting to tops with some breaks May be fairly extensive in the morning above 700-800m, local lower bases in the west, particularly near Pillar, to 400-500m. Bases likely lifting towards summit level by afternoon, clear moments likely, but Scafell may only see briefly clearings, and some risk of more extensive banks coming and going later.
Chance of cloud free summits?	Rising to 50%
Sunshine? Air clarity (below cloud)	Glimpses of sun, some sunnier periods on lower slopes, particularly east. Good visibility.
How Cold? (at 750m)	5 or 6C, rising to 8C. Feeling below freezing in strongest direct wind.
Freezing Level	Above the summits.

Lake District - Looking Ahead

	Sunday 14 June	Monday 15 June
How windy? (On the summits) Effect of wind on you?	Northwesterly 15-20mph at dawn, soon shifting northerly and easing to 10-15mph, later largely less than 10mph. Mostly small, though some gustiness over the summits in the early hours.	Southerly 15-20mph, some chance of lower speeds, particularly early, but confidence is low. Probably fairly small.
How wet? (Precipitation and its impact)	Any rain unlikely Remote chance of odd spots of light rain on western fells, but the hills likely entirely dry.	Afternoon patchy rain The morning is substantially dry, then patchy rain approaches from the southwest afternoon, falls generally light with continued dry windows. Later in the day, a risk of more extended falls.
Cloud on the hills? Chance of cloud free summits?	Likely clearing all summits May be fairly extensive above 700-800m at dawn, varied lower banks; clearest hills near Windermere to start. Bases lift through morning, the fells likely clear afternoon, an odd fleeting cap over Scafell. Rising to 90%	Least cloud in the morning Some patchy cloud at various heights in the morning, many fells probably start clear of cloud, and mostly dissipating as morning gets going. Through afternoon, a bank of cloud probably shrouds the tops, may lower more widely across high terrain. 80% lowering to 40%
Sunshine? Air clarity (below cloud)	Often sunny though weakened by high cloud. Very good visibility.	Mixed cloud and sun through morning, more often cloudy afternoon. Very good visibility.
How Cold? (at 750m) Freezing Level	6C rising to 10 or 11C. Above the summits.	9C rising to 11 or 12C. Above the summits.

Planning Outlook**All mountain areas of Britain from Sunday, 14 June, 2026**

Sunday will be a clearing day for most under a core of high pressure: early rain in Scottish Highlands easing, most cloud lifting off all hills except the north of Scotland, and good sunshine through weakened by high cloud. Temperature more widely mild, warm in Wales. Into next week, a mixed southwesterly pattern remains, windy at times with periods of rain, drizzle and low cloud most persistent in the west. Warmest in England and Wales, but may stay cooler in Scotland as low pressure to the northwest recycles air from the north Atlantic back onto the Munros. Tuesday into Wednesday shows indications of a wetter and windier spell. Pressure generally trending higher later in the week, but extensively settled weather remains elusive until at least the following week.

Forecast issued at 15:58 on Friday, 12 June, 2026
