Cloud on the hills?	Little if any	Little if any
Chance of cloud free summits?	Almost certain	80%
Sunshine? Air clarity (below cloud)	Periods of sunshine. Very good visibility although a haze.	Sunshine come through at times - often through extensive high level cloud. Hazy.
How Cold? (at 750m) Freezing Level	13 rising to 20C. Above the summits.	Reaching an unusually warm 24C in the afternoon Above the summits.

Planning Outlook

All mountain areas of Britain from Wednesday, 12 August, 2026

Chance of bursts of rain, possibly locally thundery on Wednesday NW England northwards, with further occasional rain (and low cloud) later in the week, mainly across the W & NW Highlands.

The almost completely dry and warm weather will persist elsewhere - very hot indeed Thursday. Underfoot conditions will remain exceptionally dry.

There may be little change in the pattern into next week - although there is uncertainty in the track of oncoming rain on low cloud at the end of the weekend.

Forecast issued at 13:18 on Monday, 10 August, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
