General Summary for Friday, 22 January, 2021

British Mountain Summary:

Based on forecast chart for noon 22 January, 2021

Very cold across the mountains - terrain widely frozen, very icy in places, plus lying snow in most areas. Brisk west to northwest winds will maintain a severe chill factor in exposure. Areas of snow or hail showers moving inland from western coasts.

Headline for The Northwest Highlands

Cold, windy. Snow and hail frequent in west.

Detailed Forecast for Friday, 22 January, 2021

How windy? (On the Munros)	Northwesterly 25 to 40mph.
Effect of wind on you?	Frequent buffeting, risk sudden powerful squalls. Severe wind chill.
How wet? (Precipitation and its impact)	Frequent snow and hail Clusters of heavy snow and hail showers, may merge to give frequent snow and whiteout for periods, particularly western mountains.
Cloud on the hills?	Varied, often covering tops Cloud base changing quickly in and out of precipitation. Often extensive above 800m, and shafts of cloud sometimes below 500m. Brief breaks to higher tops.
Chance of cloud free Munros?	30%
Sunshine? Air clarity (below cloud)	Brief glimpses of sun and clear air, but near-zero visibility during snow.
How Cold? (at 900m)	-6C. Where exposed to wind on higher terrain, feeling close to -20C.
Freezing Level	Terrain frozen to most lower slopes away from immediate coast.

The Northwest Highlands - Looking Ahead

	Saturday 23 January	Sunday 24 January
How windy? (On the Munros)	Westerly 20 to 30mph, may reach 40mph at times.	Direction likely to vary, occasional lulls, but risk squally 30-40mph at times.
Effect of wind on you?	Frequent buffeting, risk arduous conditions. Severe wind chill.	May be often small, but beware of changing conditions and significant wind chill.
How wet? (Precipitation and its impact)	Frequent snow and hail west Snow and hail showers continue to come in from the west, most frequent on coastal mountains, where locally rarely ceasing. Small risk isolated thunder. Fewer showers toward the Moray Firth.	Risk periods of snow and hail Detail uncertain: Areas of snow or hail showers, most frequent near west coast. May merge into a zone of constant snow for a few hours. Also periods where dry for several hours locally.
Cloud on the hills?	Varied, often covering tops Cloud base varied: Often covering mountains above 700-800m in west, and during showers forming below 500m. Brief breaks to higher tops, most common toward east.	Extensive around precipitation Cloud varied - sometimes only fragments on higher slopes, with good breaks. Around showers, forming extensively and quickly below 700m.
Chance of cloud free Munros?	30%	40%
Sunshine? Air clarity (below cloud)	Brief sun and very clear air. Appalling visibility during precipitation and/or blowing snow.	Intermittent sun and very clear air. Visibility abruptly appalling if in snow.
How Cold? (at 900m)	-5C	-4C
Freezing Level	Terrain widely frozen. Partial thawing lower coastal slopes up to 300-400m.	Terrain widely frozen. Partial thawing to 400m on hills nearest west coast.

Planning Outlook**All mountain areas of Britain from Saturday, 23 January, 2021**

All mountains sub-zero through the weekend and into early next week. Terrain widely frozen with fresh snow cover to many lower slopes. Some freeze-thaw cycles may then occur, although higher Scottish mountains may rarely lift above zero for the next couple of weeks at least. Showers of snow and hail, or further significant snowfalls in some areas. Precipitation frequent into late January. Hard frosts most common in Highland glens. Very icy underfoot in places. Wind speeds varied, occasionally reaching gale force.

Forecast issued at 14:58 on Thursday, 21 January, 2021

The production of the Scottish forecasts is fully funded by the Scottish Government through Mountaineering Scotland with the support of sportscotland. Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2021.
