General Summary for Saturday, 14 March, 2026

British Mountain Summary:

Based on forecast chart for noon 14 March, 2026

Very much less windy, especially England and Wales. But still cold day with hail and snow showers, and particularly Wales away from western hills spells of sun. The snow will penetrate to lower slopes in Scotland but be confined above 600m elsewhere.

Headline for The Northwest Highlands

Wind and snow showers easing & cloud base rising.

Detailed Forecast for Saturday, 14 March, 2026

How windy? (On the Munros)	Westerly, 25-30 to perhaps 35mph in Sutherland after dawn. Will ease to 20-25mph but gusty near showers.
Effect of wind on you?	Becoming fairly small, although balance difficult and wind chill considerable in gusty winds in precipitation.
How wet? (Precipitation and its impact)	Frequent hail and snow showers. Precipitation frequent as shower after shower comes in. Snow and above 300, rising to 500m snow.
Cloud on the hills?	Almost constantly covering higher mountains, but cloud base rising Varied cloud base: sometimes patches below 450m near precipitation mainly morning western hills. Increasingly cloud becoming confined above 700 to 1000m, lowest within a few miles of the general lie of the west coast.
Chance of cloud free Munros?	20% rising to 40%
Sunshine? Air clarity (below cloud)	Glimpses of sun, mainly away from Skye and nearby mainland. Hazy, mainly near Skye morning; very poor visibility in snow
How Cold? (at 900m)	-2C; varying by a degree or two as showers come and go. Will feel as cold as minus 16C directly in the wind.
Freezing Level	600m post dawn; mostly 800m by mid afternoon

The Northwest Highlands - Looking Ahead

	Sunday 15 March	Monday 16 March
How windy? (On the Munros) Effect of wind on you?	Westerly typically between 35 and 45mph. Risk strengthening further later afternoon onwards. Continued difficult walking and wind chill significant on exposed higher areas. Expect balance, and in places general mobility to be difficult.	West backing southwesterly; 50 to 65mph most of morning. Then gradually easing to around 40mph in a slight lull. Severe wind chill and difficult walking. Any mobility may well be a struggle at least in the morning - especially near precipitation.
How wet? (Precipitation and its impact)	Frequent snow and hail Widespread rain after dawn, snow higher tops. Soon snow as low as 600m. Through day, succession of sometimes heavy hail and snow showers (most rain only lowest slopes). Isolated thunder.	Frequent hail and snow Shower after shower; sometimes particularly morning the precipitation - often hail and above 300, later 600m snow - almost constant giving whiteout. Precipitation may set in toward dusk.
Cloud on the hills?	Very extensive on higher areas Typically, quickly varying cloud base between 450m (locally lower) and 600m near precipitation to otherwise 700 to perhaps 1000m. Generally lowest cloud base will be on more western mountains.	Rarely if at all clearing higher summits. Cloud base will vary: near precipitation forming below 450m, sometimes 300m. Otherwise, cloud base 600m morning, and 800 to perhaps temporarily 1000m (most likely Sutherland and eastern summits elsewhere) into the afternoon.
Chance of cloud free Munros?	20%	20%
Sunshine? Air clarity (below cloud)	Glimpses of sun, mainly lower slopes well inland. Varied visibility; appalling in precipitation but otherwise good - although a haze.	Glimpses of sun only - mainly lower slopes well inland. Persistent haze - but appalling visibility in precipitation.
How Cold? (at 900m) Freezing Level	Soon -2C. Will feel as cold as minus 15C where exposed to the wind. Soon between 400 and 600m.	-2C, rising toward 0C. Will feel as cold as minus 18C due to wind chill. 600m, rising toward 900m.

Planning Outlook**All mountain areas of Britain from Sunday, 15 March, 2026**

Frequent upland gales until Tuesday - generally strongest Scottish Highlands. Precipitation will continue on most mountains, focussed in the west - lengthy periods of showery weather and occasional swathes of widespread rain. Freeze thaw cycles will continue: on the Scottish Highlands, thaw periods brief and snow widely accumulating. Further south, lying snow mostly confined to higher summits.

There is now high likelihood of an abrupt transition mid-week as pressure builds north of Britain: extensively fine; cloud often clearing, particularly western Britain and temperature levels more varied - fairly warm some afternoons but frost widely at night.

Forecast issued at 7:34 on Saturday, 14 March, 2026
