# Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 11 August, 2025

British Mountain Summary:

Based on forecast chart for noon 11 August, 2025

Morning cloud and patchy rain/drizzle around north England and Scotland, primarily in the west, with a blustery west-southwesterly. Conditions easing for most though west Scotland tends to remain foggy with rain towards northwest. South Pennines and Wales substantially dry with little cloud on hills; very warm here.

Headline for Peak District

Very warm; often sunny through high cloud

Detailed Forecast for Monday, 11 August, 2025

How windy? (On the summits)	Southwest turning southerly 10-15mph. Local 20-25mph higher areas toward north early morning.
Effect of wind on you?	**Mostly small**
How wet? (Precipitation and its impact)	**Rain unlikely**
Cloud on the hills?	**Little if any**
	Possible brief patchy cloud on some slopes, mainly Lancashire Pennines early morning, soon clearing.
Chance of cloud free summits?	**Above 90%**
Sunshine? Air clarity (below cloud)	Sun and high cloud. Visibility good, but some haze building from the south later.
Temperature (at 600m)	15C in morning, rising to 20C or locally warmer afternoon; feeling humid. Little change into nighttime.
And in the valleys	14C at dawn, rising to 25C afternoon.

Peak District - Looking Ahead

	Tuesday 12 August	**Wednesday 13 August**
How windy? (On the summits) **Effect of wind on you?**	South-southeasterly 15 to 25mph, possibly reaching higher gusts over tops for periods. **Sometimes noticeably gusty around tops and edges; stability may briefly be affected.**	Southerly or variable, 10-15mph. May rise late in the day - detail uncertain. **Mostly small.**
How wet? (Precipitation and its impact)	**Chance early showers** Chance of showers early in the day. Trending towards a dry day, though an odd spot of drizzly rain may come and go.	**Likely dry, risk showers later** Low confidence: Likely dry much of the day. Small chance of some spots of rain in the afternoon, risk of heavier busts later in the day.
Cloud on the hills?	**Little if any** The hills largely clear, but locally if a shower occurs, patches may form at various heights for a time.	**Little if any** Some patchy valley mist may linger in sheltered valleys at dawn. This soon fading for clear hills.
Chance of cloud free summits?	**90%**	**Above 90%**
Sunshine? Air clarity (below cloud)	Varied high cloud covering the sky, may become increasingly sunny. Rather hazy.	Haze will limit visibility and strength of sunshine. High cloud tending to fill in later in the day.
Temperature (at 600m) **And in the valleys**	19 to 23C. 16C at dawn, soon above 20C in the morning, reaching 28C afternoon.	21 to 24C. 15C from dawn, rising to 28C

Planning Outlook

All mountain areas of Britain from Tuesday, 12 August, 2025

Very warm and humid over England and Wales in the first half of the week, this bringing a risk of thundery bursts of rain drifting northeastwards - these likely very local. Warm and humid air briefly extends across Scotland on Tuesday as well. Confidence in detail is low from Wednesday onward: risk of showers increasingly present from Wednesday evening through Thursday for many areas, which may produce heavy or thundery bursts and tending to stay warm. High pressure will rebuild from the north into the weekend, reducing the risk of rain and increasing the chance for sunny spells.

Forecast issued at 16:25 on Sunday, 10 August, 2025
