

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 27 October, 2025

British Mountain Summary:

Based on forecast chart for noon 27 October, 2025

Scotland: Cold north-west winds and snow showers easing. Mostly dry with sunny periods. Rain/snow moving in from west into night.
 England/Wales: Early showers easing, giving plenty sunshine.
 Patchy rain and low cloud moving into Wales later.

Headline for Peak District

Cold, very windy start, with a few showers. Improving with sunshine.

Detailed Forecast for Monday, 27 October, 2025

How windy? (On the summits)	Westerly 35-40mph at dawn, soon shifting NW'ly and easing to 15-30mph.
Effect of wind on you?	Comfort of walking affected, particularly in exposure. Beware arduous conditions if on the hills before dawn. Feeling chilly.
How wet? (Precipitation and its impact)	Occasional showers morning Occasional showers in morning. Rain returning from west in the night.
Cloud on the hills?	Morning patches lift off summits Some cloud clinging to high edges at dawn, notably western and northern slopes. Cloud lifts through morning off the summits.
Chance of cloud free summits?	Becoming 90%
Sunshine? Air clarity (below cloud)	Some cloud around at dawn dissipates for largely sunny conditions, some patchy high cloud forming through afternoon. Very good visibility.
Temperature (at 600m)	4C, may cool slightly on Lancashire Pennines. Feeling like -5C in the wind.
And in the valleys	5C from dawn, rising to 8C.

Peak District - Looking Ahead

	Tuesday 28 October	Wednesday 29 October
How windy? (On the summits)	Westerly 25 to 40mph	Low confidence in detail: South-westerly 30mph at dawn, will veer into west and ease back to 15 to 20mph.
Effect of wind on you?	Very blustery and gusty with significant wind chill and buffeting. Strongest winds not necessarily on highest slopes.	Blustery for periods, mainly in morning with marked wind chill and buffeting. Easing in the afternoon.
How wet? (Precipitation and its impact)	A little rain, but very small amounts. A little patchy rain now and again, mainly as a weak cold front moves through during the morning.	Rain and drizzle on and off A dull and at times wet day with rain and drizzle likely on and off. May well come on heavy for a couple of hours.
Cloud on the hills?	Occasional across the tops Occasionally cloud will cap the tops, perhaps for a few hours across western hills. Otherwise, breaks where cloud lifts off the tops.	Occasionally covering tops in rain. Varied, but patches of banks at times over tops in rain, and occasional fragments to some lower slopes should rain become persistent for a few hours.
Chance of cloud free summits?	60%	60%
Sunshine? Air clarity (below cloud)	Patchy sun coming through the clouds now and again. Visibility often very good.	Mainly grey much of the day. Visibility good, but poor for periods in rainfall.
Temperature (at 600m)	8C, but feeling sub-zero in the strongest winds.	6C
And in the valleys	10 to 12C	8 or 9C

Planning Outlook**All mountain areas of Britain from Tuesday, 28 October, 2025**

Still chilly conditions through mid-week with frontal zones edging in with rain followed by showers Wednesday. Still falling as snow over higher terrain in Scottish Highlands.

Winds shifting more southerly later in the week and into the weekend, bringing a further rise in temperature and a risk of deep low pressure systems drawing bands of rain northwards with swathes of gales or severe gales. Next week may see very unsettled conditions with frequent lows bringing strong winds and rain; largest totals western mountains. Occasional snow highest tops of Scotland where freeze-thaw cycles will prevail.

Forecast issued at 16:29 on Sunday, 26 October, 2025
