

# Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

**Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.**

## General Summary for Monday, 10 November, 2025

### British Mountain Summary:

#### Based on forecast chart for noon 10 November, 2025

Heavy rain for much of the Highlands from dawn into the morning, moving northwards, clearing to leave patchy rain, local showers in west; cloud base rising. Some showery rain in the Lakes, drier Pennines. Showers in Wales merging into clusters of heavy rain. Moderate to locally gusty southerly winds.

### Headline for Peak District

Largely dry until bursts of rain return from south, gusty later.

## Detailed Forecast for Monday, 10 November, 2025

|                                                   |                                                                                                                                                                                                                                                                                  |
|---------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b>                | Southerly 15 to 25mph, risk suddenly gusty if rain develops later.                                                                                                                                                                                                               |
| <b>Effect of wind on you?</b>                     | Fairly small, but more noticeable in places on exposed high terrain; feeling cool despite mild air.                                                                                                                                                                              |
| <b>How wet?</b><br>(Precipitation and its impact) | <b>Dry for several hours, heavy bursts later</b><br>Bursts of rain around dawn soon clearing northeastwards to be then dry for several hours through middle of day.<br>During afternoon, rain returning from south, heavy bursts frequent up to dusk, especially southern areas. |
| <b>Cloud on the hills?</b>                        | <b>Lifting above many hills for a time</b><br>Fog fairly extensive on high terrain at and before dawn, tending to lift toward or above many tops during morning. Around rain later, cloud base lowering.                                                                         |
| <b>Chance of cloud free summits?</b>              | <b>50%</b>                                                                                                                                                                                                                                                                       |
| <b>Sunshine?</b><br>Air clarity (below cloud)     | A mix of cloud and sun morning, cloudier afternoon.<br>Excellent visibility, reducing in rain.                                                                                                                                                                                   |
| <b>Temperature (at 600m)</b>                      | 7C.<br>Feeling close to freezing if exposed to wind.                                                                                                                                                                                                                             |
| <b>And in the valleys</b>                         | 9C at dawn, rising to 11 or 12C.                                                                                                                                                                                                                                                 |

## Peak District - Looking Ahead

|                                                                         | <b>Tuesday 11 November</b>                                                                                                                                                                                                           | <b>Wednesday 12 November</b>                                                                                                                                                                                                                                    |
|-------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>How windy? (On the summits)</b><br><br><b>Effect of wind on you?</b> | Southerly, strengthening rapidly from before dawn to 35 to 45mph in morning, reaching 50mph at times high tops.<br><br><b>Soon arduous walking conditions, difficult in places on higher exposed terrain, very gusty near edges.</b> | Southwesterly 20mph, to at times 30mph, likely strongest early and late in the day, turning southerly afternoon.<br><br><b>Blustery over hills around dawn, improving to be smaller middle of day, risk deteriorating to dusk onward.</b>                       |
| <b>How wet?</b><br>(Precipitation and its impact)                       | <b>Rain at times persistent</b><br>Periods of steady rain, most likely in the morning, then staying drizzly, especially in western areas, some further pulses of rain at times. Heavier again evening into night.                    | <b>Briefly drier, risk heavy rain later</b><br>Wet underfoot following overnight rain, which leaves patchy rain or drizzle into the morning, then becomes more persistent again from the south with time, risk heavier rain setting in again afternoon-evening. |

**Planning Outlook****All mountain areas of Britain from Tuesday, 11 November, 2025**

Unsettled south-southwesterlies through midweek, periods of heavy rain widespread, further flooding for Wales, the Lakes and southwest Scotland. Mountain gales on Tuesday for England, Wales, S & E Scotland. Cooler than recently in Scotland, but still generally mild England and Wales by day and night.

Later in the week, colder air pushes into Scotland, dropping below freezing over the mountains, with some snow over higher terrain in the Highlands on Thursday-Friday; strong to gale force easterly winds develop widely. Colder northeasterly air is expected to become more widespread into the weekend and next week.

**Forecast issued at 16:00 on Sunday, 9 November, 2025**

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
