

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 17 November, 2025

British Mountain Summary:

Based on forecast chart for noon 17 November, 2025

Cold everywhere, staying sub-zero over high terrain, plus some frost lower down in morning; considerable chill factor if exposed to wind, but speeds tending to lessen all areas. Largely dry, local snow flurries moving in northern Scotland. Some patchy cloud mostly northern half of the Highlands, sunnier elsewhere.

Headline for Peak District

Strongest wind early, easing. Dry with sun, hills clear.

Detailed Forecast for Monday, 17 November, 2025

How windy? (On the summits)	Northeasterly 25-30mph from dawn, gradually easing in morning, shifting northerly and easing to 15mph or below during afternoon. Northwesterly 15-20mph from dusk, later 25-30mph into night.
Effect of wind on you?	Walking strenuous with wind chill in the morning, trending towards small impacts.
How wet? (Precipitation and its impact)	No precipitation
Cloud on the hills?	None expected
Chance of cloud free summits?	Above 90%
Sunshine? Air clarity (below cloud)	Widely sunny with excellent visibility.
Temperature (at 600m)	1C, rising a degree early afternoon. Feeling like -10C in strongest morning wind.
And in the valleys	At or just above freezing at dawn, rising to 4C or locally warmer in direct sun exposure.

	Tuesday 18 November	Wednesday 19 November
How windy? (On the summits)	Generally westerly 25-30mph, though may vary through the day with lighter or stronger periods.	Northerly 25 to 40mph, likely strongest early in the day.
Effect of wind on you?	Comfortable walking affected much of the day, though variable - some risk of more arduous conditions in exposure.	Risk of challenging conditions early morning, remaining blustery all day over tops, significant wind chill.
How wet? (Precipitation and its impact)	Rain increasingly frequent Scattered showers from dawn, snow flurries perhaps mixed on on highest tops early. Showers turn to patchy rain, increasingly frequent afternoon.	Snow flurries fading Areas of snow showers over the hills from overnight may linger beyond dawn, then clearing away southwards to be substantially dry, chance a rare flurry.
Cloud on the hills?	High moors early, lowering in rain High moors likely shrouded in cloud much of the day. Most cloud above 600m well into the morning with breaks, though tending to fill in with bases lowering as rain arrives.	Lifting from hills Patchy cloud over some higher moors from dawn into morning, but lifting and clearing above the hills.
Chance of cloud free summits?	40% at first, lowering to 10%	70%
Sunshine? Air clarity (below cloud)	Some bright skies and good visibility below cloud banks in the morning, though turning overcast, poor visibility in rain.	Some early cloud, but more sunshine with time, eastern areas may stay cloudier. Visibility soon generally excellent.
Temperature (at 600m)	0C rising to 2C. Feeling like -8C in strongest direct wind.	-1C. Wind chill feeling like -10C to nearer -15C in stronger speeds.
And in the valleys	Frost likely widespread at dawn, rising to 5C.	Near freezing from dawn and soon again from dusk. Reaching max 5C early afternoon.

All mountain areas of Britain from Tuesday, 18 November, 2025

A cold week ahead, staying below freezing across all mountains, much terrain will be frozen from valleys upward. An area of low pressure and associated fronts will pass southeastward during Tuesday, bringing some persistent snowfalls, including to lower slopes particularly inland across the Highlands, some substantial accumulations over higher terrain. Strong to gale force northerlies Wednesday-Thursday, bringing snow and hail showers focused on northern Scotland and onto north-facing coastal districts elsewhere. By Friday into next weekend, winds shift back westerly and freezing levels rise to upper slopes - some rain likely, snow on high tops at times.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
