MOUNTAIN WEATHER INFORMATION SERVICE

Peak District

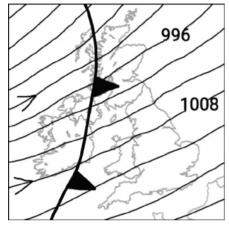

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Thursday, 27 November, 2025

British Mountain Summary: Based on forecast chart for noon 27 November, 2025

Powerful south to south-westerly winds, bringing widespread upland gales with rain on and off, frequent or constant for western mountains, and persistent fog across the hills. Later a cold front will move in, clearing to squally showers Scotland around dusk.

Headline for Peak District

Gales and significant wind chill with rain on and off and extensive hill fog.

Detailed Forecast for Thursday, 27 November, 2025

How windy? (On the summits)	South to southwesterly, strengthening through morning and with height to 45mph where exposed on higher tops.		
Effect of wind on you?	Deteriorating with significant wind chill and walking widely difficult.		
How wet?	Rain and drizzle now and again		
(Precipitation and its impact)	Pulses of rain and drizzle, although intermittently or often dry.		
Cloud on the hills? Mountains extensively foggy.			
Chance of cloud free	Almost persistent cloud from 350 to occasionally 550m.		
summits?			
Sunshine? Air clarity (below cloud)	A few glimpses of weak sun lower slopes. Visibility sometimes poor, generally hazy.		
Temperature (at 600m)	9C. Will feel as cold as minus 3C directly in the wind.		
And in the valleys	Around 12C		

MOUNTAIN WEATHER INFORMATION SERVICE

Peak District - Looking Ahead

	Friday 28 November	Saturday 29 November
How windy? (On the summits)	Southwesterly 30 to 40mph	Very low confidence: Direction varying from southwest to northerly as low passes through, 30 to 40mph, risk 50mph.
Effect of wind on you?	Be prepared for arduous conditions with significant wind chill and buffeting. Particularly gusty as showers move in.	Be prepared for significant wind chill with considerable buffeting and arduous or difficult conditions for a time.
How wet? (Precipitation and its impact)	Showers increasingly moving in	Risk of prolonged rain
	May well be a mostly dry start, but showers will likely move in from the west, concentrated along a trough of low pressure which will move through. Timing uncertainties.	Uncertainty over track of small scale low; but scope for a prolonged period of rainfall across the hills, with sleet across the tops.
Cloud on the hills?	Mostly bases above tops	Extensive in rain
	Bases varying, but generally staying above the tops keeping the hills clear. Patches may form over tops for a time during showers.	Hills covered widely in fog in prolonged rain; perhaps for several hours or all day. May lift later as winds switch to the north.
Chance of cloud free summits?	70%	
Sunshine? Air clarity (below cloud)	Occasional sun.	Overcast.
	Visibility often very good, but poor in showers.	Visibility likely often poor due to rain.
Temperature (at 600m)	3C	Around 2C
And in the valleys	6 to 8C	Maximum temperature of 5 or 6C

Planning Outlook

All mountain areas of Britain from Friday, 28 November, 2025

Colder over the weekend again, but much uncertainty on the track of a small scale low on Saturday which would bring rain, upland snow and a core of strong winds for a time, most likely England and Wales. Sunday then mostly dry, bright and cold. Next week,. a long series of Atlantic lows passing north of or across Britain will bring high rainfall to western mountains together with frequent upland gales (sometimes stormy) and low cloud. Freeze-thaw cycles, with periods of fresh snow for Scottish hills especially.
