The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Friday, 28 November, 2025

British Mountain Summary: Based on forecast chart for noon 28 November, 2025

Stormy conditions over Scottish mountains, easing only toward dusk; frequent or persistent rain and hill snow, heaviest western mountains. Severe gales high tops England & Wales, squally stormy gusts for a time with heavy bursts of rain.

Risk of hail and isolated thunder, mainly western areas.

Headline for Peak District

Gales over the hills. Showery bursts with hail.

Detailed Forecast for Friday, 28 November, 2025

How windy? (On the summits)	Southwesterly 35 to 50mph, sudden powerful squalls.	
Effect of wind on you?	Arduous conditions with significant wind chill and buffeting. Particularly gusty as showers move in.	
How wet? (Precipitation and its impact)	Showers increasingly moving in, heavy bursts with hail Mostly dry dawn, but showers soon move in from the west, then a more organised band of heavy showers middle of day as a front moves through, risk of hail, chance isolated lightning.	
Cloud on the hills?	Mostly bases above tops Bases varying, but generally staying above the tops keeping the hills clear. Patches form over tops for a time during showers.	
Chance of cloud free summits?	70% dropping to 40% in showers	
Sunshine? Air clarity (below cloud)	Occasional sun, clouding over completely for periods. Visibility often very good, but poor in showers.	
Temperature (at 600m)	3C. Wind chill feeling like -12C.	
And in the valleys	6 to 8C	

MOUNTAIN WEATHER INFORMATION SERVICE

Peak District - Looking Ahead

	Saturday 29 November	Sunday 30 November
How windy? (On the summits) Effect of wind on you?	High uncertainty: Direction varying, 20 to 35mph, perhaps stronger northerly later, risk 50mph. Be prepared for significant wind chill with considerable buffeting and arduous or difficult conditions later.	Northerly 25 to 30mph in the morning, easing gradually, to west-northwesterly 10-15mph or less afternoon. Considerable wind chill and some buffeting in exposure in morning, lessening - some uncertainty how soon improving.
How wet?	Risk of prolonged rain	Risk early rain/snow flurries
(Precipitation and its impact)	Uncertainty over track of small scale low; but scope for a prolonged period of rainfall across the hills, with sleet across the tops.	Possibility of overnight rain and some snow on higher terrain, risk heavier for a time; likely to fade out by dawn, clearing eastward to leave a dry daytime, perhaps an odd brief shower.
Cloud on the hills?	Extensive in rain	Patchy cloud clearing
	Hills covered widely in fog in prolonged rain; perhaps for several hours or all day. May lift later as winds switch to the north.	Some varied cloud banks over higher moors early in day, likely to thin and largely break up. Patches may graze higher western slopes for a few hours.
Chance of cloud free summits?	30%	60%
Sunshine? Air clarity (below cloud)	Overcast.	Fairly cloudy, some sun breaking through,
	Visibility likely often poor due to rain.	soonest in west. Visibility excellent.
Temperature (at 600m)	2C	0 or 1C, small variation with height in the morning. Feeling like -8C if exposed to strongest wind.
And in the valleys	4 to 6C.	Near freezing from dawn, rising to max 4 or 5C early afternoon.

Planning Outlook

All mountain areas of Britain from Saturday, 29 November, 2025

Colder over the weekend with the mountains near or below freezing point, including frost into glens in Scotland by Saturday night. A small scale low on Saturday most likely affects England and Wales bringing rain, upland snow and a core of strong winds for a time. Sunday then mostly dry, bright and cold. Next week, Atlantic lows passing across or just north of Britain will bring frequent rainfall to western mountains together with upland gales. A mix of chilly westerly air and some milder southwesterlies. Freeze-thaw cycles, with periods of fresh snow mostly for Scottish hills, briefly high tops elsewhere.

Forecast issued at 16:30 on Thursday, 27 November, 2025
