

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Saturday, 29 November, 2025

British Mountain Summary:

Based on forecast chart for noon 29 November, 2025

Snow showers toward northern Scotland, but much of the Highlands will be dry - sunshine and cloud breaks best toward southwest; sub-zero on tops, chilly northerly breeze. England and Wales sees rain fairly widely, snow falling on higher tops; wind very variable, but risk gales developing.

Headline for Peak District

Rain and cloud, wind may increase, sleet/snow tops evening.

Detailed Forecast for Saturday, 29 November, 2025

How windy? (On the summits) Effect of wind on you?	Some uncertainty remains as a complex weather system moves slowly: Direction likely to vary markedly, perhaps often below 20mph, but risk late in day or after dark rapidly increasing to 40mph. Likely often small, but be aware of possibly worsening conditions most likely late in the day.
How wet? (Precipitation and its impact)	Rain likely becoming heavier, sleet later Patchy rain in the morning, risk becoming more organised into persistent areas of rain, heavier bursts particularly later in the day. Turning to sleet on high tops, or from dusk snow above 500-600m.
Cloud on the hills? Chance of cloud free summits?	Covering tops most extensively in rain Varied cloud extent, but likely to often cover the higher moors, lowering most widely where rain is persistent, from mid-slopes upward in places. 30%
Sunshine? Air clarity (below cloud)	Overcast and dull. Visibility often poor, particularly in rain.
Temperature (at 600m) And in the valleys	2C, by evening dropping to 0C. Feeling near -10C if exposed to stronger wind by evening. 4 to 6C.

	Sunday 30 November	Monday 1 December
How windy? (On the summits) Effect of wind on you?	N-NW'ly 25 to 30mph in morning, easing gradually, to W'ly 10-15mph afternoon. Increasing into night S-SW'ly 40mph+. Considerable wind chill and some buffeting in exposure in morning, lessening into afternoon. Deteriorating into night.	Some uncertainty: Southerly 40 to 50mph, may vary during day, possibly briefly lower speeds. Expect challenging conditions most of the day, walking often difficult on higher terrain; considerable wind chill.
How wet? (Precipitation and its impact)	Most or all day likely dry Possibility of overnight rain and some snow on higher terrain; likely to fade out by dawn, clearing eastward to leave a dry daytime, perhaps an odd brief shower.	Persistent at times heavy rain Rain likely much of the day, intensity may vary, sometimes easing to be drizzly, but some sustained heavier falls likely.
Cloud on the hills?	Soon mostly clearing tops Patchy cloud banks over higher moors early in day, likely to thin and largely break up to clear the tops.	Fairly extensive higher moors May vary somewhat, but often shrouding the higher moors above 500-600m, at times lowering more extensively in rain, particularly west and southwest areas.
Chance of cloud free summits?	60% rising to 90%	30%
Sunshine? Air clarity (below cloud)	Broken cloud and some sun. Visibility excellent.	Largely overcast, dull in rain. Often poor visibility, locally better at times in east.
Temperature (at 600m) And in the valleys	0 or 1C, small variation with height in the morning. Feeling like -8C if exposed to strongest wind. Near freezing from dawn, rising to max 4 or 5C early afternoon.	7 or 8C. Wind chill feeling like -5C in exposure on tops. 7C at dawn, rising to 11C.

All mountain areas of Britain from Sunday, 30 November, 2025

After a lull on Sunday, areas of low pressure then circulating to the west and north will dominate the weather pattern into next week, bringing generally unsettled weather. Southwesterly air and briefly milder into Monday, with rain for most places at times, but prolonged heavier rain for England and Wales. Then typically cooler with showery conditions - higher mountains near or just below freezing point likely for the remainder of the week - some snow on tops, occasional hail. Wind speed likely to vary, some squally gusty spells, but also some lulls possible during the week ahead.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
