

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Monday, 1 December, 2025

British Mountain Summary: Based on forecast chart for noon 1 December, 2025

Morning rain and snow in Scottish Highlands breaks for several hours then returns from the south later. Rain more persistent over the Southern Uplands with heavy bursts south and a risk of strong winds. Gales and rain widely across England and Wales, increasing risk of flooding in Lakeland and west Wales.

Headline for Peak District

Gusty gales and near-persistent rain, at times heavy

Detailed Forecast for Monday, 1 December, 2025

How windy? (On the summits)	Southwesterly 40 to 50mph most likely all day, powerful gusts around edges and locally downslope to the north and east.
Effect of wind on you?	Challenging conditions throughout the day on higher terrain; downslope gusts will challenge stability on lower terrain as well. Considerable wind chill.
How wet? (Precipitation and its impact)	Persistent at times heavy rain Rain likely much of the day, intensity may vary, sometimes easing to be drizzly, but some sustained heavier falls likely, particularly areas toward north and west.
Cloud on the hills?	Fairly extensive higher moors May vary somewhat, but often shrouding the higher moors above 500-600m, at times lowering more extensively in rain, particularly west and southwest areas.
Chance of cloud free summits?	30%
Sunshine? Air clarity (below cloud)	Largely overcast, dull in rain. Often poor visibility, locally better at times in east.
Temperature (at 600m)	7C all day, perhaps cool just at and before dawn. Substantially lowering after dark to 3C in the overnight hours. Wind chill feeling like -5C in exposure on tops.
And in the valleys	7C at dawn, rising to 11C.

Peak District - Looking Ahead

	Tuesday 2 December	Wednesday 3 December
How windy? (On the summits)	Southwesterly 20-25mph; a trend towards higher speeds later.	Southwesterly 25-30mph.
Effect of wind on you?	Fairly small, but feeling breezy in exposure with noticeable wind chill on high tops.	Comfort of walking affected, particularly in exposure where it will feel chilly.
How wet? (Precipitation and its impact)	Largely dry Chance of an isolated brief shower mainly western areas. Wet underfoot after previous rain, fast-flowing streams.	Substantially dry Chance of a few odd showers, focused on western slopes and Lancashire Pennines.
Cloud on the hills?	Some areas of cloud on hills Banks of cloud covering higher slopes for periods, particularly west and southern areas, possibly to mid-lower slopes for a time mainly morning. Breaks likely to form above many hills.	Mostly high terrain, at times clear moors Variable banks of cloud in the morning, some down to lower slopes. Lifting to or likely above the tops for periods, though a risk of filling in more widely over high terrain for periods too.
Chance of cloud free summits?	60%	60%
Sunshine? Air clarity (below cloud)	Occasional sun mostly east. Visibility very good.	Frequent bursts of sunshine for periods, though at times more overcast. Excellent visibility.
Temperature (at 600m)	4C. Wind chill feeling like -3C.	3C, may rise slightly afternoon. Feeling like -5 to -8C in direct wind.
And in the valleys	5C from dawn, up to 7C afternoon.	3C at dawn though some locally cooler pockets east. Rising to 6C.

Planning Outlook**All mountain areas of Britain from Tuesday, 2 December, 2025**

A risk of local flooding remains on Tuesday in Wales and the Lake district following Monday's heavy rain.

Areas of low pressure circulating to the west and north will dominate the weather pattern in the week ahead, bringing generally unsettled weather. Temperatures near average - higher mountains near or just below freezing point likely for the remainder of the week. Often showery and cloudy in the west with broader bands of rain regularly passing east. Wind speed likely to vary though often quite strong with risk of gales coming and going.

First indications suggest unsettled weather will remain dominant into the weekend.
