## General Summary for Monday, 15 December, 2025

### British Mountain Summary:

#### Based on forecast chart for noon 15 December, 2025

A slow-moving area of rain affects England and Wales, heavy falls over south-facing hills, flooding likely. Drier for much of Scotland, though some showers affect the west coast; beware flooding after previous rain. Back just below freezing over higher Munros, some icy surfaces on tops.

### Headline for Peak District

Rain and low cloud all day, gusty wind easing.

## Detailed Forecast for Monday, 15 December, 2025

<b>How windy? (On the summits)</b>	South-southwesterly 25-35mph from dawn, easing slightly as the day goes to 15-20mph or less later.
<b>Effect of wind on you?</b>	<b>Strenuous walking in exposure most of the day with considerable buffeting over the high edges and wind chill.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Persistent rain</b> Raining throughout the daytime most of the region, steadier and sometimes heavier rain typically more western areas, continuing into evening and night. Very wet ground, streams rising.
<b>Cloud on the hills?</b>	<b>Extensive</b> Shrouding the hills all day down to middle or lower slopes, particularly in rain.
<b>Chance of cloud free summits?</b>	<b>10%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Overcast and dull. Visibility mostly poor due to rain.
<b>Temperature (at 600m)</b>	6C. Feeling like -3 to -5C in strongest direct wind.
<b>And in the valleys</b>	7 or 8C with little change all day.

## Peak District - Looking Ahead

	<b>Tuesday 16 December</b>	<b>Wednesday 17 December</b>
<b>How windy? (On the summits)</b>	West to northwesterly 10 to 20mph.	South-southwesterly 30 to 40mph, in places gusts 50mph around exposed tops and edges.
<b>Effect of wind on you?</b>	<b>Fairly small.</b>	<b>Strenuous walking conditions over the hills, buffeting gusts around some exposed spots affecting balance.</b>
<b>How wet?</b> (Precipitation and its impact)	<b>Likely dry all daytime</b> Remnants of overnight rain may linger up to dawn, but fading and clearing eastwards, leaving a dry day	<b>Rain soon develops</b> Rain pushing in from the west soon from dawn, becoming fairly persistent, some heavier falls western areas, patchier east.
<b>Cloud on the hills?</b>	<b>Likely to clear</b>  Some cloud banks over higher moors at first, but likely to thin and break up to leave the hills clear.	<b>Becoming extensive</b>  May be varied, locally clearer at first, but cloud likely to soon lower to blanket higher moors, from mid-slopes up in west.
<b>Chance of cloud free summits?</b>	<b>80%</b>	<b>30%</b>
<b>Sunshine?</b> Air clarity (below cloud)	Early cloudy skies, high cloud tending to thin to reveal some sun, soonest in west. Visibility increasingly excellent.	Overcast, increasingly murky.
<b>Temperature (at 600m)</b>	4C. Feeling like -2C directly in the breeze.	3C rising during day to 6C. Feeling like -5 to -8C directly in the wind.
<b>And in the valleys</b>	5C or perhaps locally cooler in west at dawn, rising to max 7 or 8C.	3C at dawn, slight frost some valleys. Rising to 7 or 8C.

**Planning Outlook****All mountain areas of Britain from Tuesday, 16 December, 2025**

Prolonged rain will leave flooding of streams and rivers in many mountain areas early in the new week, with the exception of northeastern Scotland. As a front clears Monday into Tuesday it will drop to freezing above 900m, beware of ice forming on higher Scottish mountains. Drier conditions for many on Tuesday, though showery near west coast of Scotland. By Wednesday, another system sweeps in from the Atlantic bringing further rain and gales. A risk of more heavy rain particularly England and Wales later in the week. A change of weather pattern is likely in the run up to Christmas, as high pressure builds northward, bringing drier weather, possibly chillier with time.
