

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Saturday, 27 December, 2025

British Mountain Summary:

Based on forecast chart for noon 27 December, 2025

Chilly easterly winds, strongest and gustiest Wales, with extensive cloud sheet eastern and into central areas, with some patchy light precipitation. Sun best western hills, and also where tops breaks above an inversion around 1000m. Terrain partly frozen, morning frost valleys; but up to plus 5C western tops above inversion.

Headline for Peak District

Chilly and gusty east wind. Cloud sheet increasingly moving in and covering tops.

Detailed Forecast for Saturday, 27 December, 2025

How windy? (On the summits)	Easterly 30 to 35mph, stronger gusts around some high edges and exposed high tops.
Effect of wind on you?	Affecting comfortable walking and balance in exposure, sudden buffeting gusts in places; considerable wind chill.
How wet? (Precipitation and its impact)	Risk a little rain east Often dry; a few brief spots of light rain from time to time mainly eastern moors.
Cloud on the hills?	Cloud sheet may lower onto the tops Most cloud above the hills initially with the best breaks in the cloud in the west. Cloud sheet may drift increasingly from the east to over terrain above 500-600m.
Chance of cloud free summits?	70% may lower to 40%
Sunshine? Air clarity (below cloud)	Rather cloudy overall, some sunny breaks western areas. Visibility good, some haze possible.
Temperature (at 600m)	2 or 3C. Feeling like -8C directly in the wind.
And in the valleys	4 to 7C.

Peak District - Looking Ahead

	Sunday 28 December	Monday 29 December
How windy? (On the summits)	Easterly 15 to 20mph, in places gusts 25mph around high tops.	Northeasterly 10 to 15mph, but tending to lift to 15 to 25mph through the day.
Effect of wind on you?	Fairly small, but noticeably blustery and gusty around exposed tops and edges, giving marked wind chill.	Mostly small, but increasingly considerable wind chill where exposed to the wind.
How wet? (Precipitation and its impact)	Dry all day	No precipitation expected
Cloud on the hills?	Largely above hills Most or all cloud above the hills, rare patches may graze highest tops.	Patchy cloud banks tops. Banks of cloud may edge in from the east to give occasional fog over the tops. May be little across western hills.
Chance of cloud free summits?	90%	60%
Sunshine? Air clarity (below cloud)	Broken cloud and sun, best in the west. Visibility very good, some distant haze.	A mix of cloud and patchy sun. Visibility mostly very good outside of any precipitation.
Temperature (at 600m)	2C. Feeling like -5C directly in the wind.	0 or 1C
And in the valleys	3 to 6C.	3 to 6C

Planning Outlook

All mountain areas of Britain from Sunday, 28 December, 2025

Next week, high pressure still dominates, but generally colder air becoming entrained into its circulation from the north, which sees lower temperatures on high terrain, sub-zero over most mountains through New Year. Small amounts of precipitation, occasional showers or snow flurries, winds north or northwesterly.

Forecast issued at 16:22 on Friday, 26 December, 2025

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2025.
