Temperature (at 600m)	6C. Will feel as cold as minus 4C where exposed to the wind.
And in the valleys	Between 7 and 9C

Peak District - Looking Ahead

	Wednesday 14 January	Thursday 15 January
How windy? (On the summits) Effect of wind on you?	Westerly 20mph morning. Then backing southerly and strengthening to 30, perhaps 35mph, by dusk. Small morning. Later walking increasingly arduous and wind chill considerable.	Southwesterly 25mph. There may be a pronounced lull but could strengthen markedly by dusk. Mostly fairly small.
How wet? (Precipitation and its impact)	Risk of snow an hail showers Risk occasional showers giving hail and snow, although rain lowest slopes. Small threat precipitation setting in late in day.	Heavy hail and snow showers Succession of rain, hail and above 600m snow showers. Small chance thunder.
Cloud on the hills? Chance of cloud free summits?	Confined to or just above higher summits Cloud may sometimes form below 450m western dales north from Saddleworth, but but cloud base generally rising to 600m. 60%	Unlikely to clear highest fells Highest fells almost always cloud covered. Cloud base typically 400 to 700m south lakes and western fells elsewhere and 500 to 800m elsewhere. May occasionally clear higher northern fells. 20%
Sunshine? Air clarity (below cloud)	Occasional sunshine. Visibility often very good.	Glimpses of sunshine. Very varied visibility: sometimes excellent, but very poor in snow.
Temperature (at 600m) And in the valleys	1C. Directly in wind will feel as cold as minus 8C. Frost many valleys after dawn. Will reach around 6C.	1C 5 or 6C in the afternoon.

Planning Outlook

All mountain areas of Britain from Wednesday, 14 January, 2026

Mostly cloudy with precipitation from time to time over the next few days - although total rainfall is now expected to be fairly small on most mountains, particularly N Scotland.

Temperature wise, it is highly likely to remain colder than recent January's with the snow pack across the Scottish Highlands being enhanced by further snowfall, whilst further south snow accumulates on higher areas, and occasional falls reaching lower slopes.

Forecast issued at 7:41 on Tuesday, 13 January, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
