

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Tuesday, 10 February, 2026

British Mountain Summary:

Based on forecast chart for noon 10 February, 2026

Windy and significant chill factor for the Highlands - murky and snow falling over the hills most persistent in eastern Scotland, rain below 600m. Better toward northwest, some cloud breaks toward coast. In northern England, lessening wind, patchy rain fading, low cloud rising higher. Drier until later for Wales.

Headline for Peak District

Moderate breeze. A little rain, fading, cloud lifting higher up.

Detailed Forecast for Tuesday, 10 February, 2026

How windy? (On the summits)	Southeasterly mostly 20mph but stronger for a few hours from dawn.
Effect of wind on you?	Mostly fairly small.
How wet? (Precipitation and its impact)	Rain and drizzle fading Patchy rain and drizzle from before dawn into the morning, tending to fade with time to be more often dry afternoon. Some patchy rain returns from west into evening.
Cloud on the hills?	May not clear highest tops Initially fog widespread from 300m up, but improving as cloud base rises to 500m - possibly sometimes above 600m.
Chance of cloud free summits?	10% rising to 30%
Sunshine? Air clarity (below cloud)	Dull and murky early in day, then occasional sunshine coming through afternoon and very good visibility below cloud.
Temperature (at 600m)	3C.
And in the valleys	Mild from dawn, 7C rising to 9C afternoon.

Peak District - Looking Ahead

	Wednesday 11 February	Thursday 12 February
How windy? (On the summits) Effect of wind on you?	Direction varied in the range 10 to 25mph. Mostly fairly small.	Detail uncertain: generally northeasterly, 25-40mph, though may be lighter and variable at times. Walking often strenuous-to-arduous in exposure with significant wind chill, some uncertainty, easier conditions possible.
How wet? (Precipitation and its impact)	Intermittent rain Rain and drizzle on and off.	Rain most of the day, some snow on tops Rain affecting the hills most of the day. Precipitation falling as sleet on high ground and perhaps turning to snow here with time.
Cloud on the hills? Chance of cloud free summits?	Very extensive Most hills persistently cloud covered above 400 to 600m. 10%	Fairly extensive Cloud soon fills in across high terrain with bases often lowering towards the middle slopes during rain. Bases likely vary but breaks to summits unlikely. 20%
Sunshine? Air clarity (below cloud)	Little or no sun. Extensively dull and misty.	Likely overcast. Poor visibility in fog and rain.
Temperature (at 600m) And in the valleys	3 or 4C. Feeling like -5C if in stronger wind. 7C, small change night into day.	2 or 3C from dawn, steady for a time, lowering later, approaching 0C into night. Feeling as cold as -13C in strongest wind. 5C from dawn, fairly steady for a time then lowering, towards near 1 or 2C into nighttime.

Planning Outlook

All mountain areas of Britain from Wednesday, 11 February, 2026

Becoming colder for all areas during this week, with much mountain terrain frozen again to increasingly lower elevations - soonest toward the north and east of Scotland. East to northeasterly winds in the second half of the week, turning northerly toward the weekend - the distribution of snow showers shifting with time from eastern hills to more north-facing mountains, particularly Scotland. Away from showers later in the week, brighter than recently with sunshine and clearer hills.
