

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Saturday, 14 February, 2026

British Mountain Summary:

Based on forecast chart for noon 14 February, 2026

A transient ridge of high pressure will bring a cold but mostly sunny day although a few snow flurries on some western hills. Nearly all terrain frozen. Toward dusk, initially near the west coast the wind will increase quickly - ahead of severe upland gales and snow overnight.

Headline for Peak District

Terrain frozen. Light wind; extensive sun.

Detailed Forecast for Saturday, 14 February, 2026

How windy? (On the summits)	Northwest or northerly 15 or 20mph at dawn. Will drop through morning to or below 10mph in a prolonged lull. Strengthening again toward dusk.
Effect of wind on you?	Small or negligible.
How wet? (Precipitation and its impact)	Precipitation not expected
Cloud on the hills?	Little if any Risk patches more western hills above 450m later afternoon.
Chance of cloud free summits?	Greater than 90%
Sunshine? Air clarity (below cloud)	Extensive bright sunshine before high level cloud spreads eastward afternoon. Excellent or superb visibility.
Temperature (at 600m)	-1C.
And in the valleys	As low as -4C at dawn, rising to 4C in afternoon - but out of the sun, terrain frozen all day.

Peak District - Looking Ahead

	Sunday 15 February	Monday 16 February
How windy? (On the summits)	Westerly 30 to sometimes 35mph.	Westerly in the range 20 to 30mph.
Effect of wind on you?	Considerable wind chill and widely arduous walking on higher areas.	May impede ease of walking and give marked wind chill.
How wet? (Precipitation and its impact)	Risk showers Snow before dawn. By late morning risk showers, mainly areas north of Manchester, although risk of an hour or two of frequent rain middle of day or afternoon.	Snow showers; sometimes frequent Snow and hail showers, mainly afternoon; may be frequent or the precipitation almost constant over a couple of hours. Mostly rain below 400m.
Cloud on the hills?	Mostly or all clearing Fog across the hills from dawn in rain. Will improve through morning as cloud base rises to or above 500 or 600m - though patches returning above 350m near showers.	Extensive on higher areas Cloud base varying, between 300m near precipitation and otherwise 500 to occasionally above the summits.
Chance of cloud free summits?	50%	30%
Sunshine? Air clarity (below cloud)	Patches of sunshine developing after dull start, although cloud often extensive north of Manchester. Excellent visibility, but poor in rain.	Occasional sunshine. Very varied visibility; very poor in snow, but otherwise very good.
Temperature (at 600m)	Soon 3C. Will feel as close to minus 8C where exposed to the wind.	1C. Will feel around minus 8C directly in the wind.
And in the valleys	Nearly all terrain frozen at first, but thaw commencing and valley temperature reaching 6 to locally 8C.	Risk slight frost some valleys at dawn. Temperature around 6C in the afternoon.

Planning Outlook**All mountain areas of Britain from Sunday, 15 February, 2026**

Persistent cold most mountain areas, particularly across Scotland next week. Further snow from time to time. England and particularly Wales will have intermittently higher freezing levels resulting in freeze-thaw cycles.
