

Peak District

The southernmost Pennines, covering the entire Peak District National Park, also extending north to hills accessed from Hebden Bridge, and including the hills immediately north of Manchester.

Alpkit is a multi-activity outdoor and bike brand for enthusiasts and adventurers making technical equipment to help you enjoy the outdoors whatever the weather. Go Nice Places, Do Good Things.

General Summary for Saturday, 27 June, 2026

British Mountain Summary:

Based on forecast chart for noon 27 June, 2026

Widely windy, afternoon gales across Scotland, possibly Lakeland and Snowdonia too. In Scotland, drizzle gives way to showery rain, setting in late in the day over western hills. Patchy rain England and Wales with dry windows and warm sunny moments, but a rising risk of showery bursts through afternoon, locally heavy.

Headline for Peak District

Strengthening wind; dry morning, risk afternoon showers

Detailed Forecast for Saturday, 27 June, 2026

How windy? (On the summits)	South-southwesterly, 20-30mph most of the day but gusty, and a tendency towards higher speeds later, strongest gusts approaching 35-40mph.
Effect of wind on you?	Blustery over high terrain, some buffeting gusts impeding walking in places with walking becoming more consistently strenuous.
How wet? (Precipitation and its impact)	Risk bursts of rain forming with local thunder The morning is likely dry. A rising risk of showers forming afternoon, which could become locally heavy; timing and location uncertain, and many moors remain dry.
Cloud on the hills?	Largely clear, some early patches Patchy cloud banks mainly in west in morning, soon lifting to clear the hills through morning. Should rain occur, patches lowering again onto high terrain, some ragged patches lower during heaviest falls.
Chance of cloud free summits?	80%
Sunshine? Air clarity (below cloud)	Periods of sun, perhaps more extensive for a few hours, but patchy high cloud and thin very high cloud around too. Some mistiness in morning. Visibility often good, but occasionally poor if rain occurs.
Temperature (at 600m)	16C rising to 21C afternoon. Still rather humid. Feeling cooler directly in wind.
And in the valleys	Humid 16C from dawn, rising to 26C by early afternoon.

Peak District - Looking Ahead

	Sunday 28 June	Monday 29 June
How windy? (On the summits)	Southwesterly, variable between 20-30mph, strongest sustained wind early hours.	Westerly 20-25mph, easing, finishing near 10mph evening or less.
Effect of wind on you?	Fairly small at times, but walking becoming impeded on exposed edges during stronger wind, notably early.	Ease of walking impacted in exposure early, notably northernmost moors, but easing to negligible effects.
How wet? (Precipitation and its impact)	Morning rain, little or none afternoon Several bands of rain pass west-to-east through morning, brief heavy falls and dry windows. Breaking into just scattered patchy rain afternoon or perhaps entirely dry.	Spotty rain, few showers, often dry A few spots of light rain drift from the west from time to time, amounting to little and more often dry. Increased risk of showers for several later afternoon hours.
Cloud on the hills?	Variable early, above summits afternoon Cloud lingering near the high tops in the morning, some breaks, but also lowering somewhat during bursts of rain. Rising above the summits afternoon.	Soon clear Some patchy cloud on upper terrain around dawn, summits may start covered, but cloud soon lifts and breaks after dawn for cloud-free moors.
Chance of cloud free summits?	50% rising to 90%	90%
Sunshine? Air clarity (below cloud)	A few bursts of morning sun, breaking to a patchwork of cloud and sun afternoon. Visibility becomes excellent.	A patchwork of cloud and sunshine, some variable thin high cloud around. Very good visibility.
Temperature (at 600m)	13C rising to 16C.	9C rising to 16 or 17C.
And in the valleys	15 or 16C at dawn, rising to 20C by early afternoon.	10 or 11C at dawn, rising to 21C afternoon.

Planning Outlook

All mountain areas of Britain from Sunday, 28 June, 2026

Cooler on Sunday as the weather pattern returns to an Atlantic influence. Bands of rain sweep eastward early Sunday, followed by fresher, sunnier weather with some patchy showers in the north and west. This westerly Atlantic pattern dominates next week: high pressure south and low pressure north will bring alternating periods of rain punctuated by bright sunshine. Wind generally on the strong side with mild to sometimes warm temperatures, though cooler and windier spells at times produce significant wind chill on Scottish tops. Day-to-day detail currently uncertain, but western hill groups from Lakeland northward will see the most cloud and patchy rain, while east and southern areas likely drier and sunnier. This pattern is indicated to continue into the following weekend.

Forecast issued at 16:30 on Friday, 26 June, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
