Chance of cloud free summits?	Soon rising to 90%
Sunshine? Air clarity (below cloud)	A patchwork of cloud and sun. Very good visibility.
Temperature (at 600m)	11C rising to 14 or 15C, or slightly cooler northernmost hills; only slight drop into night.
And in the valleys	10C at dawn, rising to 19 to 21C, warmest south Peaks.

All mountain areas of Britain from Saturday, 8 August, 2026

Westerly winds prevail into the weekend: Saturday will see extensive cloud and heavy rain develop across Scotland with gales; bands of rain passing to the south and east into England and Wales through Sunday with showers in Scotland . A ridge of high pressure early next week brings warmer temperatures and clearer hills, though western areas likely remain fairly cloudy with some drizzle on the high tops. Westerly flow returns through mid-week and a series of low pressure systems will pass west-to-east across the country with periods of strong wind (sometimes gales), rain, and low cloud, western hill groups always most affected . Mild-to-warm temperatures and sometimes quite humid. Changeable conditions persist into next weekend.

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
