General Summary for Sunday, 20 September, 2026

British Mountain Summary:

Based on forecast chart for noon 20 September, 2026

Gale-force winds over Scottish mountains early in the day lessen, but staying blustery and feeling chilly, for northern areas in particular. Showery rain in the west in the morning fading. Cloud base rising with good breaks forming, sunny spells best toward east. Lightest winds for Wales.

Headline for Peak District

Strongest wind in morning; soon generally dry, hills clear.

Detailed Forecast for Sunday, 20 September, 2026

How windy? (On the summits)	Westerly 30-35mph early morning, tending to lessen gradually to 20-25mph middle of day into afternoon, slightly less later.
Effect of wind on you?	Strenuous walking conditions moderating but still blustery and affecting on comfortable walking on tops. Feeling cool.
How wet? (Precipitation and its impact)	Little or no rain Local drizzly showers possible over western hills early in day, but mostly dry.
Cloud on the hills?	All clearing Any early patchy cloud over higher western moors soon lifting above the hills.
Chance of cloud free summits?	Soon above 90%
Sunshine? Air clarity (below cloud)	Broken cloud and sunshine; thin high cloud may thicken later. Visibility very good, early slight haze west.
Temperature (at 600m)	8C rising to 10C, then tending to rise further onward into night. Feeling near/below 0C in stronger wind.
And in the valleys	11C at dawn, rising to 15C afternoon.

[illegible]

All mountain areas of Britain from Monday, 21 September, 2026

Warm and humid air from the southwest extends across Britain early in the new week, cloaking many hills in fog and drizzle, to lower slopes near western coasts. A band of steadier rain is likely to be draped over northwest Scotland by Tuesday. Best of cloud breaks in areas further east and northeast. Rain then passes eastwards into Wednesday followed by a few showers, lower humidity and cloud bases lifting. Later in the week, areas of low pressure toward the northwest likely still bring periods of stronger winds to Scotland at least and a risk of rain at times mainly in the west, but a trend toward higher pressure and drier weather more often for the end of September into the start of October.

Forecast issued at 16:00 on Saturday, 19 September, 2026

Forecasts are issued daily by 16:30 and are kept under review and amended as necessary. However, expected conditions can still change after issue. © Copyright Mountain Weather Information Service, 2026.
